Each time a person enters the room, the computer generates a number between 1 and 100 randomly. Sometimes, every time the person enters, it shows the same value. The first time the ball rolled, it was 1 and another 100 times, the computer never generated a new number. It kept showing 1 because that ball rolled. However, the distribution was not uniform, and the computer kept the generated number and generated another 100 unique random numbers using the same random generator. The number 100 appeared the most often in that experiment because that number was the only number appearing the most often in that experiment.
