Training of teachers Great Britain: Parliament: House of Commons: Children, Schools and Families Committee, 2010-02-09 Major reforms must be introduced to help newly qualified teachers make the transition from their initial training to their first teaching post The pressures on teachers at the start of their careers are considerable and the Committee calls for measures that reduce the front loaded nature of teacher training Much greater space and incentives for early career teachers to supplement initial training with a relevant masters qualification are vital Mentoring support for these teachers must be improved and extended The Committee urges radical changes to teacher professional development including the introduction of a single overarching framework for the management of teachers career progression It says the Chartered Teacher framework would encompass a licence to practise and link pay and progression to the completion of a masters qualification and thereafter to completion of further accredited training Entry requirements for much initial teacher training provision are too low and the bar must be raised Reforms should include discontinuing undergraduate programmes for those wanting to be secondary school teachers which attract the poorest qualified candidates and requiring postgraduate trainees to have a lower second degree or above The Committee also says that supply teachers must be brought into the mainstream of the profession that in the context of the 14 19 reforms school and further education teachers should have much greater mobility across the two sectors and that the training of early years school and further education teachers

Measuring Strategies in Tactile Coordinate Metrology Robert Roithmeier, 2014-10-24 Today there is hardly any workpiece whose form parameters cannot be measured by means of coordinate measuring machines The universal use of these machines allows a wide range of application of this technology which however increases inevitably the complexity of its handling The numerous options of the machine specific operating software on the one hand and the various theoretical considerations regarding a target oriented treatment of measuring jobs on the other hand result in the fact that the measuring results obtained from the same coordinate measuring machine on the same workpiece under similar conditions may differ In Order to increase the comparability of measuring results it is necessary to provide the operators of coordinate measuring machines in addition to a well founded AUKOM training with procedure options for planning performing evaluating and documenting measurements This book by the ZEISS Metrology Academy makes a contribution towards achieving these targets
