

A survey of the research on NLE conducted in Chapter 6 continues the threads of discussion engaged in earlier chapters. The discussion correlating NLE with African-American dialects is continued here, with references to research by Clarke (2006) and others. The survey of research also serves to demonstrate the centrality of author Sandra Clarke as a scholar of NLE. Concluding with a survey of literature might seem counter-intuitive to some readers but this is a stylistic feature of all books in the *Dialects of English* series. Concluding with the survey serves to highlight how this particular volume contributes to the literature and where gaps exist, notably in the study of prosodic features of NLE and the segmental and suprasegmental features of contact varieties of Aboriginal English spoken by populations of Labrador. The final chapter of the book provides longer versions of the sample texts that are referenced in brief throughout the text. This allows readers to peruse the texts at length along with the corresponding audio files archived on the publisher's website (www.jel.ed.ac.uk/dialects/). The author also offers a description of the context in which the text was produced.

In summary, Sandra Clarke is recognized as a leading scholar in the study of NLE whose book offers a culturally situated examination of features of divergent forms of NLE phonology, morphology, and lexicology. The book is valuable for the specificity with which it tracks the multiple sound and structure differences encompassed within NLE and for its wide variety of archival and media resources that allow readers to experience the richness of NLE both over time and across a variety of socio-cultural contexts. The systematic thorough approach of the book makes it highly relevant to linguistics scholars and accessible for scholars in cognate fields. This book is a worthwhile volume for those who are interested in the study of NLE.

Event Representation In Language And Cognition:

Event Representation in Language and Cognition Jürgen Bohnemeyer, Eric Pederson, 2010-12-23 Event

Representation in Language and Cognition examines new research into how the mind deals with the experience of events. Empirical research into the cognitive processes involved when people view events and talk about them is still a young field. The chapters by leading experts draw on data from the description of events in spoken and signed languages first and second language acquisition co speech gesture and eye movements during language production and from non linguistic categorization and other tasks. The book highlights newly found evidence for how perception thought and language constrain each other in the experience of events. It will be of particular interest to linguists psychologists and philosophers as well as to anyone interested in the representation and processing of events.

The Representation of Motion Events in English and German Katharina Zaychenko, 2024-11-18 The encoding of motion event components is a central element in determining the nature of linguistic and conceptual representations underlying motion event construal. This work approaches the verbalization and conceptualization of motion events in German and English from a theoretical point of view and on the basis of a corpus study an online survey and an in person experiment. The research focuses on the investigation of different factors determining motion event construal of native speakers and learners by examining cognitive variables i.e. visual endpoint salience and cognitive cost caused by non habitual aspect use and grammatical factors i.e. grammatical viewpoint aspect.

The Segmentation and Representation of Translocative Motion Events in English and Chinese Discourse Guofeng Zheng, 2020-12-01 This book provides a systematic contrastive analysis of the segmentation and representation of English and Chinese Translocative Motion Events (TMEs) which possess Macro Event Property (MEP). It addresses all the issues critical to understanding TMEs in English and Chinese from event segmentation MEP principles and the conceptual structure of TMEs and their constituents to the representation of Actant Motion Path and Ground. The book argues that the corpus based alignment for the TME segmentation in both languages the parameters of Actant Motion Path and Ground and their relevant statistical description are particularly important for understanding English and Chinese TMEs. The linguistic materialization of Actant Ground Path and Motion together with a wealth of tables and figures offers convincing evidence to support the typological classification of English and Chinese. The book's suggestions regarding the Talmyan bipartite typology and Bohnemeyer's MEP contribute to the advancement of TME studies and language typology and help learners to understand motion events and English Chinese typological similarities and differences.

The Routledge Handbook of Translation and Cognition Fabio Alves, Arnt Jakobsen, 2020-05-31 The Routledge Handbook of Translation and Cognition provides a comprehensive state of the art overview of how translation and cognition relate to each other discussing the most important issues in the fledgling sub discipline of Cognitive Translation Studies (CTS) from foundational to applied aspects. With a strong focus on interdisciplinarity the handbook surveys concepts and methods in

neighbouring disciplines that are concerned with cognition and how they relate to translational activity from a cognitive perspective Looking at different types of cognitive processes this volume also ventures into emergent areas such as neuroscience artificial intelligence cognitive ergonomics and human computer interaction With an editors introduction and 30 chapters authored by leading scholars in the field of Cognitive Translation Studies this handbook is the essential reference and resource for students and researchers of translation and cognition and will also be of interest to those working in bilingualism second language acquisition and related areas

Encoding Motion Events Till Woerfel, 2018-09-10 Children who grow up as second or third generation immigrants typically acquire and speak the minority language at home and the majority language at school Recurrently these children have been the subject of controversial debates about their linguistic abilities in relation to their educational success However such debates fail to recognise that variation in bilinguals language processing is a phenomenon in its own right that results from the dynamic influence of one language on another This volume provides insight into cross linguistic influence in Turkish German and Turkish French bilingual children and uncovers the nature of variation in L1 and L2 oral motion event descriptions by evaluating the impact of language specific patterns and language dominance The results indicate that next to typological differences between the speakers L1 and L2 language dominance has an impact on the type and direction of influence However the author argues that most variation can be explained by L1 L2 usage preferences Bilinguals make frequent use of patterns that exist in both languages but are unequally preferred by monolingual speakers This finding underlines the importance of usage based approaches in SLA

Pragmatics of Space Andreas H. Jucker, Heiko Hausendorf, 2022-09-20 This handbook provides a comprehensive overview of spatial configurations of language use and of language use in space It consists of four parts The first part covers the various practices of describing space through language including spatial references in spoken interaction or in written texts the description of motion events as well as the creation of imaginative spaces in storytelling The second part surveys aspects of the spatial organization of face to face communication including not only spatial arrangements of small groups in interaction but also the spatial dimension of sign language and gestures The third part is devoted to the communicative resources of constructed spaces and the ways in which these facilitate and shape communication Part four finally is devoted to pragmatics across space and cultures i e the ways in which language use differs across language varieties languages and cultures

The Conceptual Mind Eric Margolis, Stephen Laurence, 2015-05-08 New essays by leading philosophers and cognitive scientists that present recent findings and theoretical developments in the study of concepts The study of concepts has advanced dramatically in recent years with exciting new findings and theoretical developments Core concepts have been investigated in greater depth and new lines of inquiry have blossomed with researchers from an ever broader range of disciplines making important contributions In this volume leading philosophers

and cognitive scientists offer original essays that present the state of the art in the study of concepts. These essays all commissioned for this book do not merely present the usual surveys and overviews; rather, they offer the latest work on concepts by a diverse group of theorists as well as discussions of the ideas that should guide research over the next decade. The book is an essential companion volume to the earlier *Concepts: Core Readings*, the definitive source for classic texts on the nature of concepts. The essays cover concepts as they relate to animal cognition, the brain, evolution, perception, and language; concepts across cultures; concept acquisition and conceptual change; concepts and normativity; concepts in context; and conceptual individuation. The contributors include such prominent scholars as Susan Carey, Nicola Clayton, Jerry Fodor, Douglas Medin, Joshua Tenenbaum, and Anna Wierzbicka. Traveling Conceptualizations Andrea Hollington, 2015-08-15 *Traveling Conceptualizations* is a monograph which is concerned with African cultural conceptualizations in Jamaica. It contributes to the study of Transatlantic relations between Africa and Jamaica and, in particular, to the understanding of African influences in Jamaican linguistic practices. The book constitutes a first study of these phenomena from a cognitive linguistic perspective and investigates traveling conceptualizations at the intersection of language, culture, and cognition. The author explores Jamaican linguistic practices in different domains, namely conceptualizations involving parts of the human body, conceptualizations of events, roles, and relations underlying serial verb constructions, and conceptualizations of kinship and names. The study can be regarded as an innovative contribution as it looks not only at linguistic expressions on the surface but discusses the underlying cultural and cognitive basis of semantic structures. The study thus aims at making African-Jamaican connections on the conceptual level visible and also discusses notions of consciousness, agency, and emblematicity. *Motion Encoding in Language and Space* Mila Dimitrova-Vulchanova, Emile van der Zee, 2013 This book brings together researchers in linguistics, computer science, psychology, and cognitive science to investigate how motion is encoded in language. Part I considers the parameters of the field, while part II looks at the way in which spatial scale or granularity plays a role in the encoding of motion in language.

Sources of Variation in First Language Acquisition Maya Hickmann, Edy Veneziano, Harriet Jisa, 2018-02-22 Developmental research has long focused on regularities in language acquisition, minimizing factors that might be responsible for variation. Although researchers are now increasingly concerned with one or another of these factors, this volume brings together research on three different sources of variation: language-specific properties, the nature of the input,

to children across contexts and several aspects of the learners themselves. Chapters explore these sources of variation within an interdisciplinary and comparative approach allying theories and methodologies stemming from linguistics, psycholinguistics, developmental psychology and neuroscience. The comparative perspective involves different languages, contexts of use, types of learners, first/second language acquisition, monolingual/bilingual learners, autism, language impairment as well as vocal and visuo-gestural communicative modalities, co-verbal gestures, sign language acquisition. The volume points to the need to enhance interdisciplinary research using complementary methodologies to further examine sources of variation and to integrate variation into a more general developmental theory.

Multimodality across Epistemologies in Second Language Research Amanda Brown, Søren W. Eskildsen, 2024-04-01. This collection highlights diverse epistemological perspectives in original research on the important role of multimodality in second language contexts. The volume explores a wide range of theoretical and methodological traditions toward foregrounding the notion that bodily action is not merely an add-on to the modality of talk but an integral part of second language teaching, learning and interaction. Following an introductory chapter, 18 empirical chapters feature either classroom or non-classroom research which shed light on different dimensions of multimodality in second language contexts including learning reflected in gesture, learning gesture across languages, the role of bodily action in language teaching and the role of movement in configuring space for effective communication. Each empirical chapter follows a consistent structure detailing the research focus, the background to each study, methodology and findings. A concluding synthesis chapter braids the insights of these chapters, drawing parallels across different methods and pointing toward crosscutting areas for future research. This book will be of interest to students and scholars in applied linguistics, multilingualism, bilingualism, gesture studies, cognitive science and psychology. Chapters 10 and 11 of this book are available for free in PDF format as Open Access at www.taylorfrancis.com. Thinking and Speaking in Two Languages Aneta Pavlenko, 2011-01-01. Dan I. Slobin, University of California, Berkeley, USA.

Concepts in the Brain David Kemmerer, 2019-02-21. For most native speakers of English, the meanings of ordinary words like blue, cup, stumble and carve seem quite natural and self-evident. It turns out, however, that they are far from universal as shown by recent research in the discipline known as semantic typology. To be sure, the roughly 6,500 languages around the world do have many similarities in the sorts of concepts they encode. But they also vary greatly in numerous ways such as how they partition particular conceptual domains, how they map those domains onto syntactic categories, which distinctions they force speakers to habitually attend to, and how deeply they weave certain notions into the fabric of their grammar. Although these insights from semantic typology have had a major impact on the field of psycholinguistics, they have been mostly neglected by the branch of cognitive neuroscience that studies how concepts are represented, organized and processed in our brains. In *Concepts in the Brain*, David Kemmerer exposes this oversight and

demonstrates its significance He argues that as research on the neural substrates of semantic knowledge moves forward it should to the extent possible expand its purview to embrace the broad spectrum of cross linguistic variation in the lexical and grammatical representation of meaning Otherwise it will never be able to achieve a truly comprehensive pan human account of the cortical underpinnings of concepts Richly illustrated and written in an accessible interdisciplinary style the book begins by elaborating the different perspectives on concepts that currently exist in the parallel fields of semantic typology and cognitive neuroscience It then shows how a synthesis of these approaches can lead to a more unified and inclusive understanding of several domains of concrete meaning specifically objects actions and spatial relations Finally it explores a number of intriguing and controversial issues involving the interplay between language cognition and consciousness

“Happiness” and “Pain” across Languages and Cultures Cliff Goddard,Zhengdao Ye,2016-07-26 In the fast growing fields of happiness studies and pain research which have attracted scholars from diverse disciplines including psychology philosophy medicine and economics this volume provides a much needed cross linguistic perspective It centres on the question of how much ways of talking and thinking about happiness and pain vary across cultures and seeks to answer this question by empirically examining the core vocabulary pertaining to happiness and pain in many languages and in different religious and cultural traditions The authors not only probe the precise meanings of the expressions in question but also provide extensive cultural contextualization showing how these meanings are truly cultural Methodologically while in full agreement with the view of many social scientists and economists that self reports are the bedrock of happiness research the volume presents a body of evidence highlighting the problem of translation and showing how local concepts of happiness and pain can be understood without an Anglo bias The languages examined include Mandarin Chinese Danish English French German Japanese Koromu a Papua New Guinean language and Latin American Spanish Originally published in International Journal of Language and Culture Vol 1 2 2014 *Applied Construction Grammar* Sabine De Knop,Gaëtanelle

Gilquin,2016-04-25 Current research within the framework of Construction Grammar CxG has mainly adopted a theoretical or descriptive approach neglecting the more applied perspective and especially the question of how language acquisition and pedagogy can benefit from a CxG based approach The present volume explores various aspects of Applied Construction Grammar through a collection of studies that apply CxG and CxG inspired approaches to relevant issues in L2 acquisition and teaching Relying on empirical data and covering a wide range of constructions and languages the chapters show how the cross fertilization of CxG and L2 acquisition teaching can improve the description of learners use of constructions provide theoretical insights into the processes underlying their acquisition e g with reference to inheritance links or transfer from the L1 or lead to novel teaching practices and resources aimed to help learners make the generalizations that native speakers make naturally from the input they receive **Predication in African Languages** James Essegbey,Enoch O.

Aboh,2024-07-15 This book discusses patterns of predication and their grammatical and semantic implications in a variety of

African languages It covers several prominent topics about predication in the languages including locative predication expressions of tense aspect and mood in relation to verbal complexes and verb serialisation verb semantics and nominalization of predicates The chapters take inspiration from Felix Ameka's approach to the study of language according to which the main task of a linguist is to collaborate with language users to understand communicative practices in different contexts and to uncover how these practices impact grammatical and semantic aspects of the language Accordingly the descriptions and analyses in this book serve to understand language variation in different ecologies rather than to impose pre established descriptive frames on less described languages Together the chapters in the book represent a bird's eye view of predication strategies in various African languages and can therefore serve as readings for both introductory and advanced level courses on predication from a typological or comparative perspective

Motion and Space across Languages Iraide Ibarretxe-Antuñano, 2017-08-15 This volume offers a unique combination of interdisciplinary research and a comprehensive overview of motion and space studies from a semantic typological perspective The chapters present cutting edge research covering central topics such as the status of semantic components in motion event descriptions and their role in typological variation the function of linguistic multimodal structures for the codification of motion the diachronic evolution of motion expressions and its effects on motion typologies the correspondences between physical and non physical fictive metaphorical motion and the impact of contexts and genres on the characterization and interpretation of motion events These issues are examined from a theoretical and applied linguistic perspective L1 L2 acquisition translation interpreting The analyses make use of diachronic and synchronic data collected by a range of methods elicitation experimentation and corpus research in more than fifteen languages All in all this book will be of great value to scholars and students interested in the expression of motion and space across languages

Multi-verb constructions in Eastern Indonesia Volker Unterladstetter, 2020 Constructions with multiple verbal elements have posed a long standing challenge to linguistic analysis Most studies of verb serialisation have been confined to single languages rather than looking at crosslinguistic patterns This book provides the first in depth account into the areal characteristics of multi verb constructions MVCs in Eastern Indonesia By collating published data as well as corpus data from 32 Austronesian and Papuan languages the study traces commonalities as well as differences in MVC use across the area Analysis takes place on two levels first the morpho syntactic behaviour of MVCs is taken into account As this plane of analysis arguably does not provide any meaningful insights into why MVCs are construed and used the way they are a semantic account of MVCs is

presented One of the main hypotheses advanced in this book is that the crucial driving force behind multi verb construals is semantic interaction between the verbs leading to four principal techniques of event formation merging staging modification and free juxtaposition The study aims at showing that while all four techniques are to varying degrees in use in Eastern Indonesian languages the morpho syntactic output does not necessarily mirror these underlying differences in event conception Applying insights from Davidsonian event semantics as well as from predicate decomposition the book provides a model of event interaction that helps to explain differences in MVC behaviour such as issues in constituent order or operator assignment

Reviewing **Event Representation In Language And Cognition**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is really astonishing. Within the pages of "**Event Representation In Language And Cognition**," an enthralling opus penned by a very acclaimed wordsmith, readers attempt an immersive expedition to unravel the intricate significance of language and its indelible imprint on our lives. Throughout this assessment, we shall delve into the book's central motifs, appraise its distinctive narrative style, and gauge its overarching influence on the minds of its readers.
