

Excretory System

You drink plenty of liquids. Water, soda, juice, milk, and others, plus, there are also liquids in the solid foods you eat. Where does it all go, and what happens to it once it goes there?

The **excretory system** of the body controls all the fluids entering or leaving your body. The system removes excess and unnecessary fluids from the body.

The organs include the kidneys, lungs, liver, and the skin. Each of the organs have a responsibility in the system, but the kidneys are the main organs of the excretory system. In addition, the urinary system is a part of the excretory system. The **urinary system** controls the balance of water and chemicals in the body for it to function properly. The system works with the lungs, kidneys, and the intestines. The urinary system produces, stores, and eliminates **urine** (pee), which is the fluid released by the kidneys. Other parts of the excretory system include the ureters, bladder, and urethra.
