Custom and Lock Bolt

The draw on your Genesis Pro bow can adjust to suit you or the bow. They use the patented design you put into the bow with the string is released. As the moment of release, the draw potential energy is transferred into string in motion, and the arrow is propelled toward the target.

The draw stop on the bow is a fixed rest and can also adjust to adjust the draw length on your bow. Using a 1/4" hex wrench, the draw stop can be turned in a counter-clockwise direction to decrease the draw length of the bow to a minimum of 15 lbs. Turning the draw stop clockwise will increase the bow to its maximum of 35 lbs. One full turn equals approximately 1/4 lbs. of draw weight. The draw stop on each bow should always be turned to the same number of turns when adjusting draw weight.

BSA's Genesis Pro bow and its features offered as part of an offer and are not intended for sale alone and without BSA.

Genesis Pro Bowstring System

The Genesis Pro bow features single cam design. The adjustable cam allows the bow to maintain its set percentage through out the draw cycle. The adjustable cam acts as the cam rollers and guides the bow string. When the bowstring is released, the cam creates a "hook effect" which results in a better arrow while increasing bow speed.

Draw Stop

Customizing the Genesis Pro to your draw length is easy!

The draw stop on the Genesis® Pro is adjusted with an Allen wrench. Simply turn the draw stop counter-clockwise until it is completely removed. Draw it to the desired draw stop position. Tighten with security in place. Use the larger diameter draw stop to adjust to 1/2" (approx.) increments and the smaller diameter draw stop to adjust to 1/4" (approx.) increments.

Tip

The double hooking up on your Genesis bow is actually designed to fit the contours of your hand, providing both comfort and consistency.

Shooting

Be sure your Genesis Pro bow has a high-strength, durable bowstring made from steel of the set features. The bowstring provides superior performance, ensuring that the maximum amount of the bow's stored energy is transferred to the arrow.

Power Cable and Cable Guard

The power cable is the second component of the bowstring assembly. It is anchored at the ends on the upper limb and wraps around the take-up hook on the rest which is mounted on the lower limb.

The cable guard is the metal rest which supports the sliding cable cage that keeps the cable safely off to one side and out of the light path of the arrow.

Hooking Point

You or your local pro shop must properly install a string rest to ensure proper arrow position on the string for repeatable accuracy.

WARNING: Make certain the arrow rest is in proper length and allows for your bow's draw weight and draw length. Use and follow your state manufacturer's recommendations.
