Handbook of Creativity John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views *The Unschooling Handbook* Mary Griffith, 2010-05-05 To Unschoolers Learning Is As Natural As Breathing Did you know that a growing percentage of home schoolers are becoming unschoolers The unschooling movement is founded on the principle that children learn best when they pursue their own natural curiosities and interests Without bells schedules and rules about what to do and when the knowledge they gain through mindful living and exploration is absorbed more easily and enthusiastically Learning is a natural inborn impulse and the world is rich with lessons to be learned and puzzles to be solved Successful unschooling parents know how to stimulate and direct their children s learning impulse Once you read this book so will you **The Exploratorium Science Snackbook** Exploratorium Teacher Institute, 2009-10-05 Kids and teachers can build their own science projects based on exhibits from San Francisco s premiere science museum This revised and updated edition offers instructions for building junior versions or snacks of the famed Exploratorium s exhibits The snacks designed by science teachers can be used as demonstrations labs or as student science projects and all 100 projects are easy to build from common materials The Exploratorium a renowned hands on science museum founded by physicist and educator Frank Oppenheimer is noted for its interactive exhibits that richly illustrate scientific concepts and stimulate learning Offers a step by step guide for building dynamic science projects and exhibits Includes tips for creating projects made from easy to assembly items Thoroughly revised and updated including new snacks images and references

Deep Knowledge Douglas B. Larkin, 2015-04-25 *Deep Knowledge* is a book about how people's ideas change as they learn to teach. Using the experiences of six middle and high school student teachers as they learn to teach science in diverse classrooms, Larkin explores how their work changes the way they think about students, society, schools, and science itself. Through engaging case stories, *Deep Knowledge* challenges some commonly held assumptions about learning to teach and tackles problems inherent in many teacher education programs. This book digs deep into the details of teacher learning in a way seldom attempted in teacher education textbooks.
