Neil,Nancy A. Speck,Andre van Wijnen,2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes As highlighted in the introduction and several of the 29 chapters humans and other mammals have three RUNX genes that are known to play specific roles in blood bone and neuronal development However their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well known signaling pathways Wnt TGFb Notch Hippo is indicative of a more general function in cell biology Their documented roles in cell fate decisions include control of proliferation differentiation survival senescence and autophagy The pleiotropic effects of RUNX in development are mirrored in cancer where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes In the latter role they display hallmarks of both gatekeepers that modulate p53 responses and caretakers that protect the genome from DNA damage Several chapters focus on the importance of these genes in leukemia research where RUNX1 and CBFb are frequently affected by chromosomal translocations that generate fusion oncoproteins while recent studies suggest wider roles for RUNX modulation in solid cancers Moreover RUNX genes are intimately involved in the development and regulation of the immune system while emerging evidence suggests a role in innate immunity to infectious agents including HIV At the biochemical level the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis Not surprisingly RUNX activity is controlled at multiple levels this includes miRNAs and a plethora of post translational modifications Several chapters highlight the interplay between the three mammalian RUNX genes where cross talk and partial functional redundancies are evident Finally structural analysis of the RUNX CBFb interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy This volume provides a compendium and reference source that will be of broad interest to cancer researchers developmental biologists and immunologists **Globalization in an Age of Crisis** Robert C. Feenstra,Alan M. Taylor,2014-01-07 Along with its painful economic costs the financial crisis of 2008 raised concerns over the future of international policy making As in recessions past new policy initiatives emerged approaches that placed greater importance

on protecting national interests than promoting international economic cooperation Whether in fiscal or monetary policies the control of currencies and capital flows the regulation of finance or the implementation of protectionist policies and barriers to trade there has been an almost worldwide trend toward the prioritizing of national economic security But what are the underlying economic causes of this trend and what can economic research reveal about the possible consequences Prompted by these questions Robert C Feenstra and Alan M Taylor have brought together top researchers with policy makers and practitioners whose contributions consider the ways in which the global economic order might address the challenges of globalization that have arisen over the last two decades and that have been intensified by the recent crisis Chapters in this volume consider the critical linkages between issues including exchange rates global imbalances and financial regulation and plumb the political and economic outcomes of past policies for what they might tell us about the future of the global economic cooperation
