New material includes inequalities, differentiation of parametric equations, differentiation of hyperbolic functions and homogeneous first order differential equations. This book also caters specifically for the engineering mathematics units of the Higher National Engineering schemes from Edexcel, including the core unit Analytical Methods for Engineers and the two specialist units Further Analytical Methods for Engineers and Engineering Mathematics, in their entirety common to both the electrical/electronic engineering and mechanical engineering pathways. A mapping grid is included showing precisely which topics are required for the learning outcomes of each unit for ease of reference. The book is supported by a suite of free web downloads: Introductory level algebra To enable students to revise basic algebra needed for engineering courses available at <http://books.elsevier.com/companions/9780750681520>; Instructor's Manual Featuring full worked solutions and mark scheme for all 19 assignments in the book and the remedial algebra assignment available on <http://www.textbooks.elsevier.com> for lecturers only; Extensive Solutions Manual 640 pages featuring worked solutions for 1 000 of the further problems and exercises in the book available on <http://www.textbooks.elsevier.com> for lecturers only.
