## **Managing Biosecurity Across Borders:**

**Managing Biosecurity Across Borders** Ian Falk, Ruth Wallace, Marthen L. Ndoen, 2011-07-03 Managing biosecurity is everybody's business. The book's multi-site, multi-sectoral research contributes to an holistic evidence-based strategy for managing plant biosecurity in complex contexts. The intent is to provide a starting point for all stakeholders in the biosecurity endeavor: policy personnel at all levels of governance, planners and regional developers, non-government organizations, community groups and individuals to plan localized strategies that fit national needs and constraints and the way people live their lives. In putting forward a strategy, we draw on many disciplines and cultural perspectives on a problem that is fundamentally a multidisciplinary and global issue. At the same time, the contributing researchers remain aware that such a strategy is always subject to local contextual factors and influences indigenous and local knowledge and culture and is regarded as a tool for planning always subject to change.

*Biosecurity* Andrew Dobson, Kezia Barker, Sarah L. Taylor, 2013-08-15 Biosecurity is the assessment and management of potentially dangerous infectious diseases, quarantined pests, invasive alien species, living modified organisms and biological weapons. It is a holistic concept of direct relevance to the sustainability of agriculture, food safety and the protection of human populations including bio-terrorism, the environment and biodiversity. Biosecurity is a relatively new concept that has become increasingly prevalent in academic, policy and media circles and needs a more comprehensive and interdisciplinary approach to take into account mobility, globalisation and climate change. In this introductory volume, biosecurity is presented as a governance approach to a set of concerns that span the protection of indigenous biological organisms, agricultural systems and human health from invasive pests and diseases. It describes the ways in which biosecurity is understood and theorized in different subject disciplines including anthropology, political theory, ecology, geography and environmental management. It examines the different scientific and knowledge practices connected to biosecurity governance including legal regimes, ecology, risk management and alternative knowledges. The geopolitics of biosecurity is considered in terms of health, biopolitics and trade governance at the global scale. Finally, biosecurity as an approach to actively secure the future is

assessed in the context of future risk and uncertainties such as globalization and climate change

**Integrating Biological Control into Conservation Practice** Roy van Driesche, Daniel Simberloff, Bernd Blossey, Charlotte Causton, Mark Hoddle, Christian O. Marks, Kevin M. Heinz, David L. Wagner, Keith D. Warner, 2016-05-17 Invasive species have a critical and growing effect upon natural areas They can modify degrade or destroy wildland ecosystem structure and function and reduce native biodiversity Landscape level solutions are needed to address these problems Conservation biologists seek to limit such damage and restore ecosystems using a variety of approaches One such approach is biological control the deliberate importation and establishment of specialized natural enemies which can address invasive species problems and which should be considered as a possible component of restoration Biological control can be an effective tool against many invasive insects and plants but it has rarely been successfully employed against other groups Safety is of paramount concern and requires that the natural enemies used be specialized and that targeted pests be drivers of ecological degradation While modern approaches allow species to be selected with a high level of security some risks do remain However as in all species introductions these should be viewed in the context of the risk of failing to reduce the impact of the invasive species This unique book identifies the balance among these factors to show how biological control can be integrated into ecosystem restoration as practiced by conservation biologists Jointly developed by conservation biologists and biological control scientists it contains chapters on matching tools to management goals tools in action measuring and evaluating ecological outcomes of biological control introductions managing conflict over biological control and includes case studies as well as an ethical framework for integrating biological control and conservation practice Integrating Biological Control into Conservation Practice is suitable for graduate courses in invasive species management and biological control as well as for research scientists in government and non profit conservation organizations
