

Chapter 13 - Exercises

13.1 Briefly define immediate addressing.

- It is an instruction format that directly includes the data to be acted on as part of the instruction

13.2 Briefly define direct addressing.

- A scheme in which the address specifies which memory word or register contains the operand.

13.3 Briefly define indirect addressing.

The direct addressing a method of addressing in which the contents of the address specified in the instruction (which may itself be an effective address)

13.4 Briefly define register addressing.

- The address field refers to a register that contains the operand

13.5 Briefly define register indirect addressing.

- The address field refers to a register, which in turn contains the effective address of the operand.

13.6 Briefly define displacement addressing.

- The instruction has two address fields, at least one of which is explicit. The value contained in one address field (value = A) is used directly. The other address field refers to a register whose contents are added to A to produce the effective address.

13.7 Briefly define relative addressing.

- Relative addressing: The implicitly referenced register is the program counter (PC). That is, the current instruction address is added to the address field to produce the EA.

13.8 What is the advantage of autoindexing?

- It is typical that there is a need to increment or decrement the index register after each reference to it. Because this is such a common operation, some systems will automatically do this as part of the same instruction cycle, using autoindexing.

13.9 What is the difference between postindexing and preindexing?

- These are two forms of addressing, both of which involve indirect addressing and indexing. With preindexing, the indexing is performed before the indirection. With postindexing, the indexing is performed after the indirection.

13.10 What facts go into determining the use of the addressing bits of an instruction?

Number of addressing modes.

Number of operands: Typical instructions on today's machines provide for two operands.
