Mix Wizard User Manual:

Vortex Portable Mixer Peter Paker, 2014-12-29 A vortex mixer or vortexer is a simple device used commonly in laboratories to mix small vials of liquid. It consists of an electric motor with the drive shaft oriented vertically and attached to a cupped rubber piece mounted slightly off center. As the motor runs, the rubber piece oscillates rapidly in a circular motion. When a test tube or other appropriate container is pressed into the rubber cup or touched to its edge, the motion is transmitted to the liquid inside and a vortex is created. Most vortex mixers have variable speed settings and can be set to run continuously or to run only when downward pressure is applied to the rubber piece. This ebook by Peter Paker will give a brief explanation on vortex mixer. For more information, visit http://alkalisci.com/lab/equipment/vortex_mixers.html
