

## Cell Size

What determines the size of a cell?

### Why

?

Sometimes bigger is better—tall basketball players, more closet space, and savings accounts may come to mind. What about cells? Does having big cells make an organism bigger or better? Would having larger cells be an advantage to an organism? If so, why do cells divide rather than continue growing? Maybe there is an advantage to being small.

### Model 1 – Investigating Cell Size

1. Are the cells shown in Model 1 plant or animal cells? Explain your answer.  
**ANIMAL – NO CELL WALL, CHLOROPLAST, LARGE CENTRAL VACUOLE**

2. Label Cell B in Model 1 with the following structures.

|               |           |              |
|---------------|-----------|--------------|
| cell membrane | cytoplasm | nucleus      |
| ribosomes     | vacuole   | mitochondria |

3. Compare the smaller cell in Model 1 to the larger cell in Model 1.

- a. Which cell has a larger surface area (more cell membrane surface)?

**CELL B (LARGER CELL) HAS A LARGER SURFACE AREA THAN CELL A.**

- b. Which cell has more channels in its cell membrane that can transport molecules (nutrients, oxygen, and waste products) in and out of the cell?

**CELL B (LARGER CELL) HAS MORE CELL MEMBRANE CHANNELS THAN CELL A.**

Even,Sam Virtue,Nicholas M. Morton,Gilles Fromentin,Robert K. Semple,2018-02-15 Not only developed countries but also most developing areas of the world have experienced a surge in obesity prevalence over recent decades Obesity complications are now among the leading causes of premature mortality encompassing conditions such as coronary heart disease stroke and type 2 diabetes This places a heavy burden on contemporary healthcare systems While rodent models have limitations as experimental models of human obesity related disease study of rats and mice either spontaneously prone or resistant to obesity or genetically engineered to illuminate underlying mechanisms has yielded key information about the metabolic defects linked to obesity and their associated diseases This topic includes both original research studies and reviews of the use of animal studies in specific areas of obesity related disease Various methodological approaches are discussed with evaluation of the extent to which use of animal models has facilitated progress or conversely has proved a cul de sac in investigation of human disease mechanisms Consideration is also given to future strategies to use such rodent models optimally to enhance comprehension and treatment of pandemic human obesity related diseases

**Gaseous Detonation Physics and Its Universal Framework Theory** Zonglin Jiang, Honghui Teng, 2022-12-16 This book highlights the theories and research progress in gaseous detonation research and proposes a universal framework theory that overcomes the current research limitations Gaseous detonation is an extremely fast type of combustion that propagates at supersonic speed in premixed combustible gas Being self sustaining and self organizing with the unique nature of pressure gaining gaseous detonation and its gas dynamics has been an interdisciplinary frontier for decades The research of detonation enjoyed its early success from the development of the CJ theory and ZND modeling but phenomenon is far from being understood quantitatively and the development of theories to predict the three dimensional cellular structure remains a formidable task being essentially a problem in high speed compressible reacting flow This theory proposed by the authors research group breaks down the limitation of the one dimensional steady flow hypothesis of the early theories successfully correlating the propagation and initiation processes of gaseous detonation and realizing the unified expression of the three dimensional structure of cell detonation The book and the proposed open framework is of high value for researchers in conventional applications such as coal mine explosions and chemical plant accidents and state of the art research fields such as supernova explosion new aerospace propulsion engines and detonation driven hypersonic testing facilities It is also a driving force for future research of detonation
