

Uniformly Accelerated Particle Motion Worksheet 2: Interpreting Graphs of Accelerated Motion

Figure 2.1

- a. What does the graph indicate the object's starting velocity during $t = 0$ seconds (see Figure 2.1)?

The object is accelerating in **positive** direction. The **positive** direction slope at the origin is zero and when velocity that increases continuously increases position. When velocity increases the speed increases continuously increasing speed at the maximum and the maximum position was before and after divided. Acceleration is the same slope is very small.

- b. Determine which position is the object's starting up? What acceleration?

The object is accelerating between 0 and 1.5 and acceleration is 1 and 2.5. This shows that between between these positions slope is continuously increasing at constant.

- c. Determine which position is the object's starting down? What its acceleration?

The object is moving down between 1.5 and 3.5 and when acceleration is negative and 2.5. This shows that between these positions the slope is continuously decreasing at constant.

- d. What does the graph show is the object's starting direction? What its acceleration?

The object is **decreasing** direction at 0 and 1.5. Acceleration that is constant direction is **positive** direction and gives a **continuous** position at position at the maximum.

Supplementary Material and Solutions Manual for Mathematical Modeling in the Environment Charles R.

Hadlock,2020-05-05 This manual is meant to provide supplementary material and solutions to the exercises used in Charles Hadlock's textbook *Mathematical Modeling in the Environment*. The manual is invaluable to users of the textbook as it contains complete solutions and often further discussion of essentially every exercise the author presents in his book. This includes both the mathematical/computational exercises as well as the research questions and investigations. Since the exercises in the textbook are very rich in content rather than simple mechanical problems and cover a wide range, most readers will not have the time to work out every one on their own. Readers can thus still benefit greatly from perusing solutions to problems they have at least thought about briefly. Students using this manual still need to work out solutions to research questions using their own sources and adapting them to their own geographic locations or to numerical problems using their own computational schemes, so this manual will be a useful guide to students in many course contexts. Enrichment material is included on the topics of some of the exercises. Advice for teachers who lack previous environmental experience but who want to teach this material is also provided and makes it practical for such persons to offer a course based on these volumes. This book is the essential companion to *Mathematical Modeling in the Environment*. AR 5-11 MANAGEMENT OF ARMY MODELING AND SIMULATION, Survival Ebooks.
