Hildebrand, Lawson W. Brigham, Tafsir M. Johansson, 2018-08-11 This volume brings together multiple perspectives on both the changing Arctic environment and the challenges and opportunities it presents for the shipping sector It argues for the adoption of a forward looking agenda that respects the fragile and changing Arctic frontier With the accelerated interest in and potential for new maritime trade routes commercial transportation and natural resource development the pressures on the changing Arctic marine environment will only increase The International Maritime Organization Polar Code is an important step toward Arctic stewardship This new volume serves as an important guide to this rapidly developing agenda Addressing a range of aspects it offers a valuable resource for academics practitioners environmentalists and affected authorities in the shipping industry alike [Responses to Sea Migration and the Rule of Law](#) Katia Bianchini, 2024-08-22 In the current debates on sea migration there is a dearth of works drawing on the rule of law This important book addresses this failing Considering the question from that conceptual framework it is able to broaden the sometimes fragmented and incomplete perspective of existing scholarship The book takes as its central case study the experience of Italy exploring the legal issues at play there and its institutional practices and policies From here its focus broadens out to the wider EU experience looking in particular at those problems common to southern EU states such as failures and delays in assisting migrants in distress at sea and contested legal grounds and practices concerning interceptions at sea It combines both legal and empirical data charting both the black letter law and how it operates in practice In a field as complex as this this clarity is key it allows lawyers political scientists and policymakers to truly engage with the challenges sea migration poses today *Modeling, Analysis, Control and Removal of Oil and Hydrocarbon Spills* Tatiana Chaplina, 2025-02-21 A large number of scientific works are devoted to the study and modeling of accidental oil spills However there is no single approach to the description of processes and a generally accepted system of models An additional fundamental difficulty is the impossibility of conducting full fledged full scale experimental studies which makes it difficult to verify the adequacy and accuracy of oil spill models Our book is devoted to the problems of experimental investigation and theoretical description of spills as well as the practical removal of

various petroleum products from the water surface and ice It provides an overview of the most well known theoretical models of the process of spreading oil stains on the water surface Also in the relevant sections an original spreading model based on an energy approach is proposed and analyzed The results of new experimental studies of the dynamics of the process for various hydrocarbons on water including variations in its temperature and salinity are presented In the following chapters a theoretical description of oil spreading on the upper and lower surfaces of floating ice is proposed modeling phenomena in the Arctic and subarctic zones of the world ocean New experimental data on the spreading of petroleum products on the ice surface are presented The final part provides a brief overview of the existing most used and promising methods for removing of hydrocarbons from the water surface New original constructive solutions to this problem are proposed the technical characteristics of which have received theoretical justification and experimental confirmation **Safety and Reliability.**

of emerging importance There are to our knowledge no directly competing titles with the same interdisciplinary approach to conceptualize understand and describe best practices for area based management approaches There are however related titles which cover some aspects of area based management usually from narrow disciplinary perspectives Area based management in the governance of shipping has become a useful and effective approach to promote maritime safety maritime security and pollution prevention and to mitigate the adverse impacts of shipping on the marine environment and coastal communities Based on the results of a research project and a major workshop convened at Dalhousie University in Canada this book consists of multidisciplinary studies and analyses of major issues pertaining to area based management in shipping from a comparative perspective but with the principal focus on Canada The book contains both theoretical and empirical contributions

Decision Modes in Complex Task Environments Norbert Steigenberger, Thomas Lübcke, Heather Fiala, Alina Riebschläger, 2017-05-25 Despite intense research on decision making in action we still know little about when decision makers rely on deliberate vs intuitive decision making in decision situations under complexity and uncertainty Building on default interventionist dual processing theory this book studies decision making modes deliberate vs intuitive in complex task environments contingent on perceived complexity experience and decision style preference We find that relatively inexperienced decision makers respond to increases in subjective complexity with an increase in deliberation and tend to follow their decision style preference Experienced decision makers are less guided by their decision preference and respond to increases in subjective complexity only minimally This book contributes to a developing stream of research linking decision making with intra personal and environmental properties and fosters our understanding of the conditions under which decision makers rely on intuitive vs deliberate decision modes In doing so we go one step further towards a comprehensive theory of decision making in action
