The British under the leadership of the great Cambridge mathematical physicist Lord Rayleigh produced highly elaborate investigations of the nature of discontinuous flow while the Germans following Ludwig Prandtl in Göttingen relied on the tradition called technical mechanics to explain the flow of air around a wing. Much of the basis of modern aerodynamics emerged from this remarkable episode yet it has never been subject to a detailed historical and sociological analysis. In *The Enigma of the Aerofoil* David Bloor probes a neglected aspect of this important period in the history of aviation. Bloor draws upon papers by the participants, their restricted technical reports, meeting minutes and personal correspondence, much of which has never before been published and reveals the impact that the divergent mathematical traditions of Cambridge and Göttingen had on this great debate. Bloor also addresses why the British even after discovering the failings of their own theory remained resistant to the German circulation theory for more than a decade. The result is essential reading for anyone studying the history, philosophy or sociology of science or technology and for all those intrigued by flight.

The Scientific Letters and Papers of James Clerk Maxwell: Volume 2, 1862-1873 James Clerk Maxwell, 1990. Volume II 1862-1873 contains texts which illuminate Maxwell's scientific maturity. In this period he wrote the classic works on field physics and statistical molecular theory which established his unique status in the history of science. His important correspondence with Thomson and Tait provides remarkable insight into the major themes of his physics.

Connecting Math Concepts: Presentation book 2 Siegfried Engelmann, 1992. Develops learning from component skills to applications and problem solving not from applications to skills.
