Integrated Circuit and System Design Enrico Macii, Vassilis Paliouras, Odysseas Koufopavlou, 2004-08-24 Welcome to the proceedings of PATMOS 2004 the fourteenth in a series of international workshops PATMOS 2004 was organized by the University of Patras with technical co-sponsorship from the IEEE Circuits and Systems Society Over the years the PATMOS meeting has evolved into an important European event where industry and academia meet to discuss power and timing aspects in modern integrated circuit and system design PATMOS provides a forum for researchers to discuss and investigate the emerging challenges in signal methodologies and tools required to develop the upcoming generations of integrated circuits and systems We realized this vision this year by providing a technical program that contained state of the art technical contributions a keynote speech three invited talks and two embedded tutorials The technical program focused on timing performance and power

consumption as well as architectural aspects with particular emphasis on modelling design characterization analysis and optimization in the nanometer era This year a record 152 contributions were received to be considered for possible presentation at PATMOS Despite the choice for an intense three day meeting only 51 lecture papers and 34 poster papers could be accommodated in the single track technical program The Technical Program Committee with the assistance of additional expert reviewers selected the 85 papers to be presented at PATMOS and organized them into 13 technical sessions As was the case with the PATMOS workshops the review process was anonymous full papers were required and several reviews were received per manuscript

Parallel Computing Barbara Chapman, 2010 From Multicores and GPUs to Petascale Parallel computing technologies have brought dramatic changes to mainstream computing the majority of today's PCs laptops and even notebooks incorporate multiprocessor chips with up to four processors Standard components are increasingly combined with GPUs Graphics Processing Unit originally designed for high speed graphics processing and FPGAs Free Programmable Gate Array to build parallel computers with a wide spectrum of high speed processing functions The scale of this powerful hardware is limited only by factors such as energy consumption

and thermal control However in addition to **FM 2005: Formal Methods** John Fitzgerald, Ian J. Hayes, 2005-08-25 This volume contains the proceedings of Formal Methods 2005 the 13th International Symposium on Formal Methods held in Newcastle upon Tyne UK during July 18-22 2005 Formal Methods Europe FME www.fmeurope.org is an independent association which aims to stimulate the use of and research on formal methods for system development FME conferences began with a VDM Europe symposium in 1987 Since then the meetings have grown and have been held about once every 18 months Throughout the years the symposia have been notably successful in bringing together researchers tool developers vendors and users both from academia and from industry Formal Methods 2005 confirms this success We received 130 submissions to the main conference from all over the world Each submission was carefully refereed by at least three reviewers Then after an intensive in depth discussion the Program Committee selected 31 papers for presentation at the conference They form the bulk of this volume We would like to thank all the Program Committee members and the referees for their excellent and efficient work Apart from the selected contributions the Committee invited three keynote lectures from Mathai Joseph Marie Claude Gaudel and Chris Johnson You will find the abstracts papers for their keynote lectures in this volume as well

An innovation for the FM2005 program was a panel discussion on the history of formal methods with Jean Raymond Abrial Dines Bjørner Jim Horning and Cli Jones as panelists Unfortunately it was not possible to reflect this event in the current volume but you will find the material documenting it elsewhere see the conference Web page [Brick and Block Masonry](#) Claudio Modena, F. da Porto, M.R. Building Embedded Systems Changyi Gu, 2016-05-26 Develop the software and hardware you never think about We're talking about the nitty gritty behind the buttons on your microwave inside your thermostat inside the keyboard used to type this description and even running the monitor on which you are reading it now Such stuff is termed embedded systems and this book shows how to design and develop embedded systems at a professional level Because yes many people quietly make a successful career doing just that Building embedded systems can be both fun and intimidating Putting together an embedded system requires skill sets from multiple engineering disciplines from software and hardware in particular Building Embedded Systems is a book about helping you do things in the right way from the beginning of your first

project Programmers who know software will learn what they need to know about hardware Engineers with hardware knowledge likewise will learn about the software side Whatever your background is Building Embedded Systems is the perfect book to fill in any knowledge gaps and get you started in a career programming for everyday devices Author Changyi Gu brings more than fifteen years of experience in working his way up the ladder in the field of embedded systems He brings knowledge of numerous approaches to embedded systems design including the System on Programmable Chips SOPC approach that is currently growing to dominate the field His knowledge and experience make Building Embedded Systems an excellent book for anyone wanting to enter the field or even just to do some embedded programming as a side project What You Will Learn Program embedded systems at the hardware level Learn current industry practices in firmware development Develop practical knowledge of embedded hardware options Create tight integration between software and hardware Practice a work flow leading to successful outcomes Build from transistor level to the system level Make sound choices between performance and cost Who This Book Is For Embedded system engineers and intermediate electronics enthusiasts who are seeking tighter integration between software and hardware Those who favor the System on a Programmable Chip SOPC approach will in particular benefit from this book Students in both Electrical Engineering and Computer Science can also benefit from this book and the real life industry practice it provides

Low Power RF Circuit Design in Standard CMOS Technology Unai Alvarado,Guillermo Bistué,Iñigo Adín,2011-10-18 Low Power Consumption is one of the critical issues in the performance of small battery powered handheld devices Mobile terminals feature an ever increasing number of wireless communication alternatives including GPS Bluetooth GSM 3G WiFi or DVB H Considering that the total power available for each terminal is limited by the relatively slow increase in battery performance expected in the near future the need for efficient circuits is now critical This book presents the basic techniques available to design low power RF CMOS analogue circuits It gives circuit designers a complete guide of alternatives to optimize power consumption and explains the application of these rules in the most common RF building blocks LNA mixers and PLLs It is set out using practical examples and offers a unique perspective as it targets designers working within the standard CMOS process and all the limitations inherent in these technologies
