Khamsi, 2020-01-24 This unique mathematical volume brings together geometers analysts differential equations specialists and graph theorists to provide a glimpse on recent mathematical trends whose commonalities have hitherto remained for the

most part unnoticed The applied mathematician will be pleasantly surprised with the interpretation of a voting system in terms of the fixed points of a mapping given in the book as much as the classical analyst will be enthusiastic to find detailed discussions on the generalization of the notion of metric space in which the metric takes values on an abstract monoid Classical themes on fixed point theory are adapted to the diverse setting of graph theory thus uncovering a set of tools whose power and versatility will be appreciated by mathematicians working on either area The volume also includes recent results on variable exponent spaces which reveal much needed connections with partial differential equations while the incipient field of variational inequalities on manifolds also explored here will be of interest to researchers from a variety of fields

Cases on STEAM Education in Practice Bazler, Judith, Van Sickle, Meta, 2017-02-08 Curriculums for STEM education programs have been successfully implemented into numerous school systems for many years Recently the integration of arts education into such programs has proven to be significantly beneficial to students resulting in a new method of teaching including science technology engineering art and mathematics *Cases on STEAM Education in Practice* is an essential research publication for the latest scholarly information on curriculum development instructional design and educational benefits of STEAM learning initiatives Featuring coverage on a range of topics including fine arts differentiated instruction and student engagement this book is ideally designed for academicians researchers and professionals seeking current research on the implementation of STEAM education *Lady Astronauts, Lady Engineers, and Naked Ladies* Karin Hilck, 2019-07-08 The book *Lady Astronauts Lady Engineers and Naked Ladies* is a gender history of the American space community and by extension a social history of American society in the twentieth century during the Cold War In order to expand and differentiate the prevalent postwar narrative about gender relations and cultural structures in the United States the book analyzes several different groups of women interacting in different social spaces within the space community It therewith grants insight into the several layers of female participation and agency in the community and the gender and race based obstacles and hurdles the female prospective astronauts scientists engineers artists administrators writers hostesses secretaries and wives were faced with at NASA and in the space industry In each chapter a different social space within the space community is analyzed The spaces where the women lived and worked are researched from a media individual and institutional angle ultimately revealing the differing gender philosophies communicated in the public sphere and the space community workplaces by government and space community officials While women were publicly encouraged to participate in the American space effort to beat the Soviet Union in the race to the moon women had to deal with gender based barriers which were integral to the structures of the space community just as they were an intrinsic component of all societal structures in the United States in the 1960s The female space workers who were often perceived as disrupters of the prevalent social order in the space community and discriminated by some of their male colleagues and bosses on a personal basis still managed to assert themselves They molded pockets of agency in the space community workspaces without the

facilitation of regulations on the part of NASA that might have provided them with easier access or more agency. Thus the space community a place of technological innovation was not necessarily also a place of social innovation but a community with a government agency at its center that mainly mirrored the current changing social order conventions and policies in the 1960s as well as in the 1970s and 1980s. Nevertheless the women presented in this book were instrumental in advancing and consolidating the social transformation that happened within the space community and the United States and therefore make intriguing subjects of research. Thus this systematic analysis of the connection between gender space and the Cold War adds a new dimension to space history as well as expands the discourse in American history about gender relations and the opportunities of women in the twentieth century.

Invitations from Afar Linda A.W. King, 2012-06-11 After fulfilling every objective of a top secret mission to Jupiter's Ganymede and now only days from home, four NASA astronauts learn from their computer systems analyst in Houston through an unauthorized channel that a bomb may be on a rendezvous course with their ship, the Copernicus Mission Specialist Jana Novacek, the youngest astronaut ever who has been chosen for mysterious reasons, suggests breaking security, announcing their existence to everyone over the net and asking for help. Someone might be willing to help who unknowingly is involved in the plot against them. Cocommander Fawzshen Prince of Rhatania further recommends revealing their amazing discovery. Commander Jackson Medwin thinks that Jana's journal is ideal for that purpose. Jana is distressed and feels her personal journal is not suitable. Commander Medwin will do anything to save his crew, this mission and their discovery, but he decides neither to take evasive actions nor break security until they have proof that something is on a collision course with their ship. He considers a deactivated meteoroid detection program uploaded to them from Houston as
