Program began twenty years ago to provide support for women entering doctoral programs in the mathematical sciences. With a steadfast commitment to diversity among participants, faculty and staff, EDGE initially alternated between Bryn Mawr and Spelman Colleges. In later years, EDGE has been hosted on campuses around the nation and expanded to offer support for women throughout their graduate school and professional careers. The refereed papers in *A Celebration of the EDGE Program's Impact on the Mathematics Community and Beyond* range from short memoirs to pedagogical studies to current mathematics research. All papers are written by former EDGE participants, mentors, instructors, directors, and others connected to EDGE. Together, these papers offer compelling testimony that EDGE has produced a diverse new generation of leaders in the mathematics community. This volume contains technical and non-technical works and is intended for a far-reaching audience, including mathematicians, mathematics teachers, diversity officers, university administrators, government employees, writing educational or science policy, and mathematics students at the high school, college, and graduate levels. By highlighting the scope of the work done by those supported by EDGE, the volume offers strong evidence of the American Mathematical Society's recognition that EDGE is a program that makes a difference. This volume offers unique testimony that a 20-year-old summer program has expanded its reach beyond the summer experience to produce a diverse new generation of women leaders, nearly half of whom are underrepresented women. While some books with a women-in-math theme focus only on one topic, such as research or work-life balance, this book's broad scope includes papers on mathematics research, teaching, outreach, and career paths.

Managing Mathematical Projects - with Success! P.P.G. Dyke, 2006-04-29. The first student-centred guide on how to write projects and case studies in mathematics, with particular attention given to working in groups, something maths undergraduates have not traditionally done. With half of all universities in the UK including major project work of significant importance, this book will be essential reading for all students in the second or final year of a mathematics degree or on courses with a high mathematical content, for example physics and engineering.

The chapters include studies on technologies such as virtual manipulatives, apps, custom-built assessment tools, dynamic geometry, computer algebra systems, and communication tools. Chiefly focusing on teaching and learning mathematics, the book also includes two chapters that address the evidence for technologies' effects on school mathematics. The diverse technologies considered provide a broad overview of the potential that digital solutions hold in connection with teaching and learning. The chapters provide both a snapshot of the status quo of technologies in school mathematics and
