Molecular Genetics and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing NGS into clinical practice remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC

Quality Issues in Clinical Genetic Services Ulf Kristoffersson,Jörg Schmidtke,J. J. Cassiman,2010-06-25 Initially genetic disorders were all considered as rare diseases At present in the mid of 2009 the OMIM catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect However altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution Adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder Further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person Thus genetic disorders are not rare Measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems In many countries national authorities started to implement recommendations guidelines or legal procedures regulating quality of health care delivery In laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use With the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process As many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred While international quality criteria ISO have been in existence for a number of years the regulation of quality issues still may differ between countries Based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of thisbook share their experience and give examples of the implementation of quality issues in national quality systems worldwide This book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders

for improving the plant tolerance to biotic and abiotic stresses Krishnanand P. Kulkarni, Amaranatha Reddy Vennapusa, Balaji Aravindhana Pandian, Rupesh Deshmukh, 2024-05-31 Crop plants are constantly exposed to multiple abiotic such as drought salinity cold flooding heavy metal and heat and or biotic bacterial fungal viral stress factors that hinder their growth and development subsequently leading to decreases in quality and yield During the last two decades many classical genetic and breeding approaches have been used to develop stress tolerant and climate adaptable plants that can provide a better yield to meet food demands Climate change poses a major risk to food security as the world faces frequent floods droughts heat waves and the emergence of new invasive pests and diseases Novel genomic and genetic approaches look promising to improve plant resilience under stress conditions and achieve sustainable crop improvements Recent advances in sequencing technologies have facilitated the generation of a plethora of genomic resources in a variety of crop and plant species With the increased availability of genomic and transcriptomic data an increasing number of quantitative trait loci and candidate genes are being identified for their application in improving plant tolerance to abiotic and biotic stresses New approaches such as genomic selection and genomic assisted breeding have been utilized to develop stress tolerant cultivars in a variety of plant species Furthermore transgenics and rapidly evolving CRISPR technology offer great potential for plant improvement This Research Topic aims to provide insights into the molecular and genetic factors involved in imparting abiotic and biotic stress tolerance in plants and their application in enhancing plant adaptation to these stress conditions To review the progress in this research category we invite manuscripts related to the plant responses to abiotic biotic stresses and trait improvement through genomic selection and transgenic or gene editing approaches Studies including physiological biochemical and molecular genetic analyses revealing the mechanisms involved in plant response to abiotic biotic stresses are welcome Topic editor Dr Balaji Aravindhana Pandian is employed by Enko Chem Inc All other Topic Editors declare no competing interests with regard to the Research Topic subject
