

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1) Circles are females and squares are males.
- 2) A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of persons 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother in I?

These parents (1) had a color-blind son (4). His dad has no redness, but color-blindness came from his mother. Since the mother is not shaded, she must be a carrier.

Number 10 is colorblind, just like her father. Where could she get her allele for colorblindness?

She inherited her allele for colorblindness from her mother. Must have been that 1 is a carrier. From her father.

Number numbers 11 and 13 were colorblind. How did they have a colorblindness (X^b)?

Both mothers carry the allele for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color-blind daughter, she would have to inherit the colorblind allele from each parent. Her father must be X^bY and mother would have to be X^bX^b.

If number 14 has a normal son, what is the probability that their son will be colorblind?

$X^B X^b \times X^B Y \rightarrow$ all of their sons will have color-blindness.

(Carrier) (normal)
