

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] circles are females and squares are males.
- [I] is shaded = affected = square indicates that a person has the trait.

The pedigree seen below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of persons 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These parents (1) had a color blind son (2). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded she must be a carrier.

Number 3 is colorblind and the father is normal. How could this be? He got his allele for colorblindness?

Yes, he inherited his allele for colorblindness from his mother. Must have been that 1's chromosomes from her father.

Number numbers 11 and 12 were colorblind. How did they have a colorblind son (1)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be X^c Y and mother must have to be X^c X^c.

If mother 11 has a normal son, what is the probability that their son will be colorblind?

$X^N X^c \times X^c Y \rightarrow$ all of their sons will have color blind.

(normal male)
