**Progress in Spatial Data Handling** Andreas Riedl, Wolfgang Kainz, Gregory A. Elmes, 2006-09-01 Since the first symposium in 1984 the International Symposia on Spatial Data Handling SDH has become a major resource for recent advances in GIS research The International Symposium on Spatial Data Handling is regarded as a premier international research forum for GIS All papers are fully reviewed by an international program committee composed of experts in the field

**GIS for Business and Service Planning** Paul A. Longley, Graham Clarke, 1996-02-14 GIS for Business and Service Planning Edited by Paul Longley Graham Clarke The field of geographical information systems GIS is developing rapidly finding applications in an ever widening range of commercial contexts This volume examines the practical use of GIS for business and service planning It considers ways in which GIS may be customised to meet specific user requirements and tackle the applied research challenges of the late 1990s GIS for Business and Service Planning introduces the management analysis and modelling of information within GIS and considers some of the basic problems and pitfalls that can occur in practice covers the major topics of geodemographics and how geographical information can be manipulated and merged into business application databases discusses the relative merits of customised versus proprietary solutions to business application databases examines the range of consultancy applications of GIS for business using international case studies assessing how recent applications have benefited from research developments critically assesses GIS in the market place and evaluates different GIS strategies GIS for Business and Service Planning is essential reading for GIS professionals marketers GIS students and management scientists The other contributors Peter Batey University of Liverpool Mark Birkin GMAP Peter Brown University of Liverpool Martin Clarke GMAP Paul Cresswell SPA Marketing Systems David Maguire ESRI US David Martin University of Southampton Ian Masser University of Sheffield Stan Openshaw University of Leeds Nora Sherwood GIS World and Robin Waters GeoInformation International

**Multidimensional Geographic Information Science** Jonathan Raper, 2000-11-23 The way people normally view a GIS is 2 dimensional a greatly limiting form However as developments occur within the field researchers and practitioners are finding ways to make a GIS 3 dimensional and in some instances even 4 dimensional Being able to view a GIS in more than 2 dimensions greatly enhances its usability This forward looking

Estimating Ore Grade Using Evolutionary Machine Learning Models Mohammad Ehteram, Zohreh Sheikh Khozani, Saeed Soltani-Mohammadi, Maliheh Abbaszadeh, 2022-12-27 This book examines the abilities of new machine learning models for predicting ore grade in mining engineering A variety of case studies are examined in this book A motivation for preparing this book was the absence of robust models for estimating ore grade Models of current books can also be used for the different sciences because they have high capabilities for estimating different variables Mining engineers can use the book to determine the ore grade accurately This book helps identify mineral rich regions for exploration and exploitation Exploration costs can be decreased by using the models in the current book In this book the author discusses the new concepts in mining

engineering such as uncertainty in ore grade modeling Ensemble models are presented in this book to estimate ore grade In the book readers learn how to construct advanced machine learning models for estimating ore grade The authors of this book present advanced and hybrid models used to estimate ore grade instead of the classic methods such as kriging The current book can be used as a comprehensive handbook for estimating ore grades Industrial managers and modelers can use the models of the current books Each level of ore grade modeling is explained in the book In this book advanced optimizers are presented to train machine learning models Therefore the book can also be used by modelers in other fields The main motivation of this book is to address previous shortcomings in the modeling process of ore grades The scope of this book includes mining engineering soft computing models and artificial intelligence **Spatial Decision Support Systems**

Ramanathan Sugumaran, John Degroote, 2010-11-15 Although interest in Spatial Decision Support Systems SDSS continues to grow rapidly in a wide range of disciplines students planners managers and the research community have lacked a book that covers the fundamentals of SDSS along with the advanced design concepts required for building SDSS Filling this need

*Spatial Decision Support System Artificial Intelligent Methods for Handling Spatial Data* Jörg Verstraete, 2018-08-31 This book provides readers with an insight into the development of a novel method for regridding gridded spatial data an operation required to perform the map overlay operation and apply map algebra when processing spatial data It introduces the necessary concepts from spatial data processing and fuzzy rulebase systems and describes the issues experienced when using current regridding algorithms The main focus of the book is on describing the different modifications needed to make the problem compatible with fuzzy rulebases It offers a number of examples of out of the box thinking to handle aspects such as rulebase construction defuzzification spatial data comparison etc At first the emphasis is put on the newly developed method and additional datasets containing information on the underlying spatial distribution of the data are identified After this an artificial intelligent system in the form of a fuzzy inference system is constructed using this knowledge and then applied on the input data to perform the regridding The book offers an example of how an apparently simple problem can pose many different challenges even when trying to solve it with existing soft computing technologies The workflow and solutions to solve these challenges are universal and may therefore be broadly applied into other contexts Proceedings of

Tenth International Congress on Information and Communication Technology Xin-She Yang, R. Simon Sherratt, Nilanjan Dey, Amit Joshi, 2025-09-26 This book gathers selected high quality research papers presented at the Tenth International Congress on Information and Communication Technology ICICT 2025 held in London on February 18 21 2025 It discusses emerging topics pertaining to information and communication technology ICT for managerial applications e governance e agriculture e education and computing technologies the Internet of Things IoT and e mining Written by respected experts and researchers working on ICT the book offers an asset for young researchers involved in advanced studies The work is presented in ten volumes Comprehensive Geographic Information Systems, 2017-07-21 Geographical Information

Systems Three Volume Set is a computer system used to capture store analyze and display information related to positions on the Earth's surface. It has the ability to show multiple types of information on multiple geographical locations in a single map enabling users to assess patterns and relationships between different information points, a crucial component for multiple aspects of modern life and industry. This 3 volumes reference provides an up to date account of this growing discipline through in depth reviews authored by leading experts in the field.

**VOLUME EDITOR** Thomas J Cova, The University of Utah, Salt Lake City, UT, United States; Ming Hsiang Tsou, San Diego State University, San Diego, CA, United States; Georg Bareth, University of Cologne, Cologne, Germany; Chunqiao Song, University of California, Los Angeles, CA, United States; Yan Song, University of North Carolina at Chapel Hill, Chapel Hill, NC, United States; Kai Cao, National University of Singapore, Singapore; Elisabete A Silva, University of Cambridge, Cambridge, United Kingdom.

Covers a rapidly expanding discipline providing readers with a detailed overview of all aspects of geographic information systems principles and applications. Emphasizes the practical socioeconomic applications of GIS. Provides readers with a reliable one stop comprehensive guide saving them time in searching for the information they need from different sources.

*Achieving Sustainable E-Government in Pacific Island States* Rowena Cullen, Graham Hassall, 2017-02-17. This book analyzes the common set of obstacles to the development and integration of government Information and Communication Technology (ICT) projects and effective e government initiatives in developing countries. It draws on the expertise and experience of more developed states in the Pacific, notably Australia and New Zealand, both highly rated in global rankings for e government and active in a variety of e government development projects across the region. There has been a general failure to identify priorities and align projects with local needs in ICT e government projects. Small Island Developing States (SIDS) present a unique problem in terms of e government. Not only do they suffer from a common set of barriers to ICT development such as their remoteness, geographical dispersion, moist tropical climates, largely rural populations, and lack of ICT capacity and infrastructure, but are also dependent on external agencies for investment and must negotiate with powerful donors who have conflicting agendas. E government is widely regarded as transformational, increasing efficiency, productivity, accountability, economic growth, and citizen involvement. But while the governments of SIDS are committed to harnessing ICTs for effective government and economic development, they face major challenges in establishing successful e government initiatives due to the problems outlined above, coupled with a lack of HR capacities and appropriate strategies and policies. Drawing on the experience of the states mentioned above, as well as regional quasi governmental bodies, nongovernmental organizations, NGOs, aid agencies, and the private sector, the book will be of interest to researchers and students in the fields of e government, public administration, political science, communication, information science, and social media.
