DIFFERENTIAL LOCK

When a tractor with a conventional differential assembly is working in soft soil and one wheel starts to slip, all the drive is transmitted to that wheel and traction ceases.

To overcome this condition, a differential locking device is available on all Ford 2600 and 3600 Tractors.

The differential lock can be engaged to connect the right-hand side gear to the differential case assembly. This action locks the differential assembly together and provides a direct drive to both wheels.

The differential lock assembly, Figure 2, consists of a sliding coupler, an adaptor and a fork and lever assembly. The sliding coupler is splined onto the protruding end of the right-hand side gear.
