CMDR COE Conference on Crisis Management and Disaster Response held in the period June 4-6, 2024 in Sofia, Bulgaria as a hybrid participation event. Environmental protection and disaster risk topics are challenging fields that the scientific world is trying to address. Earthquakes, floods, fires, droughts, blizzards, dust storms, natural releases of toxic gases and liquids, diseases, and other environmental variations affect hundreds of millions of people each year. Many disaster events are triggered by human activities. Dealing with these problems requires a multidisciplinary scientific approach. Actions in these directions are taken more and more in the recent years by political bodies, NGOs, and scientific groups trying to find sustainable solutions for the future generations. Every point of view matters when it comes to our global home, The Planet Earth. This book presents recent advances in the topics: disaster management, natural hazards, risk reduction, and building resilience, climate change, challenges, and security implications, resilience, and business continuity management, high performance computing, modeling, and simulations, GIS for environmental monitoring, and artificial intelligence. The book is focused on important large scale applications like environmental and climate modeling, computational optimizations, and algorithms for specific hazard situations analyses.

Mega Quakes: Cascading Earthquake Hazards and Compounding Risks Katsuichiro Goda, Tiziana Rossetto, Nobuhito Mori, Solomon Tesfamariam, 2018-03-15. Large scale earthquake hazards pose major threats to modern society, generating casualties, disrupting socioeconomic activities, and causing enormous economic loss across the world. Events such as the 2004 Indian Ocean tsunami and the 2011 Tohoku earthquake highlighted the vulnerability of urban cities to catastrophic earthquakes. Accurate assessment of earthquake related hazards, both primary and secondary, is essential to mitigate and control disaster risk exposure effectively. To date, various approaches and tools have been developed in different disciplines. However, they are fragmented over a number of research disciplines, and underlying assumptions are often inconsistent. Our society and infrastructure are subjected to multiple types of cascading earthquake hazards; therefore, integrated hazard assessment and risk management strategy is needed for mitigating potential consequences due to multi hazards. Moreover, uncertainty modeling and its impact on hazard prediction and anticipated consequences are essential parts of probabilistic earthquake hazard and risk assessment. The Research Topic is focused upon modeling and impact assessment of cascading earthquake hazards including mainshock, ground shaking, aftershock, tsunami, liquefaction, and landslide.
