Microbiology: A Laboratory Manual, 7/e Cappuccino, 2012. Microbiology is a dynamic science. It is constantly evolving as more information is added to the continuum of knowledge and as microbiological techniques are rapidly modified and refined. To provide a blend of traditional methodologies with more contemporary procedures to meet the pedagogical needs of all students studying microbiology, this seventh edition contains a large number of diverse experimental procedures providing instructors with the flexibility to design a course syllabus that meets their particular instructional approach. I have focused on updating the terminology, equipment, and procedural techniques used in the experiments. I also modified and clarified the background information and experimental procedures and revised the color plate insert.
