Model Predictive Vibration Control Gergely Takács, Boris Rohal-Ilkiv, 2012-03-14 Real time model predictive controller MPC implementation in active vibration control AVC is often rendered difficult by fast sampling speeds and extensive actuator deformation asymmetry If the control of lightly damped mechanical structures is assumed the region of attraction containing the set of allowable initial conditions requires a large prediction horizon making the already computationally demanding on line process even more complex Model Predictive Vibration Control provides insight into the predictive control of lightly damped vibrating structures by exploring computationally efficient algorithms which are capable of low frequency vibration control with guaranteed stability and constraint feasibility In addition to a theoretical primer on active vibration damping and model predictive control Model Predictive Vibration Control provides a guide through the necessary steps in understanding the founding ideas of predictive control applied in AVC such as the implementation of computationally efficient algorithms control strategies in simulation and experiment and typical hardware requirements for piezoceramics actuated smart structures The use of a simple laboratory model and inclusion of over 170 illustrations provides readers with clear and methodical explanations making

Model Predictive Vibration Control the ideal support material for graduates researchers and industrial practitioners with an interest in efficient predictive control to be utilized in active vibration attenuation **Vehicle Vibrations** Reza N.

Thermoelastic Behaviour of Spacecraft Structures Simon Appel,Jaap Wijker,2021-08-31 This book provides recommendations for thermal and structural modelling of spacecraft structures for predicting thermoelastic responses It touches upon the related aspects of the finite element and thermal lumped parameter method A mix of theoretical and practical examples supports the modelling guidelines Starting from the system needs of instruments of spacecraft the reader is supported with the development of the practical requirements for the joint development of the thermal and structural models It provides points of attention and suggestions to check the quality of the models The temperature mapping problem typical for spacecraft thermoelastic analysis is addressed The principles of various temperature mapping methods are presented The

prescribed average temperature method co developed by the authors is discussed in detail together with its spin off to provide high quality conductors for thermal models The book concludes with the discussion of the application of uncertainty assessment methods The thermoelastic analysis chain is computationally expensive Therefore the 2k 1 point estimate method of Rosenblueth is presented as an alternative for the Monte Carlo Simulation method bringing stochastic uncertainty analysis in reach for large thermoelastic problems Solutions Manual for Engineering Vibrations William J.
