Science and Service Learning Jane L. Newman, Dennis W. Sunal, Cynthia S. Sunal, 2016-12-01 The goal of Volume VII of Research in Science Education is to examine the relationship between science inquiry and service learning Its primary intent is to bridge the gaps between research and practice The volume is meant to be useful to science and service learning researchers and practitioners such as teachers and administrators because it provides information about strategies to integrate service learning into the science curriculum and instruction The main themes relate to such topics as Student science academic engagement and academic achievement Teacher instructional strategies in science and service learning Science curricula adaptation or development Civic responsibility of students and community partners Resiliency of students at risk Effect of standards based service learning and science on student outcomes such as academic engagement civic engagement and resiliency to adversity Specific case studies and strategies focus on how to Make learning more engaging Encourage collaboration among students teachers and community partners Improve academic competence Create social civic responsibility Stimulate resiliency in students at risk Improve student interest in STEM subjects and majors Develop STEM career interests Improve the quality of science and service learning instruction through addressing standards Students can learn in teacher centered classrooms however a learner centered class that focuses on science inquiry and service learning is more authentic and engaging to learners This type of learning may not be the only way to teach however many educators believe that it is the best way for students to learn Jordan 2005

Visible Learning for Science, Grades K-12 John Almarode, Douglas Fisher, Nancy Frey, John Hattie, 2018-02-15 In the best science classrooms teachers see learning through the eyes of their students and students view themselves as explorers But with so many instructional approaches to choose from inquiry laboratory project based learning discovery learning which is most effective

for student success In *Visible Learning for Science* the authors reveal that it is not which strategy but when and how a vital K-12 framework for choosing the right approach at the right time depending on where students are within the three phases of learning: surface, deep and transfer. Synthesizing state-of-the-art science instruction and assessment with over fifteen years of John Hattie's cornerstone educational research, this framework for maximum learning spans the range of topics in the life and physical sciences. Employing classroom examples from all grade levels, the authors empower teachers to plan, develop and implement high impact instruction for each phase of the learning cycle. Surface learning: when through precise approaches students explore science concepts and skills that give way to a deeper exploration of scientific inquiry. Deep learning: when students engage with data and evidence to uncover relationships between concepts, students think metacognitively and use knowledge to plan, investigate and articulate generalizations about scientific connections. Transfer learning: when students apply knowledge of scientific principles, processes and relationships to novel contexts and are able to discern and innovate to solve complex problems. *Visible Learning for Science* opens the door to maximum impact science teaching so that students demonstrate more than a year's worth of learning for a year spent in school.

Outstanding Teaching in Lifelong Learning Harriet Harper, 2013-10-16 What makes a lesson outstanding? This book describes what expert teachers do in classrooms, workshops, laboratories and workplaces and examines why they are so successful. The evidence emerges from twenty real lessons judged by Her Majesty's Inspectors to be outstanding. The book examines the features these lessons have in common. The shared characteristics focus on the ways in which teachers plan, teach and assess in order to ensure that all their students work hard, enjoy learning and achieve high standards. As well as examining the most frequently used approaches to teaching and assessment in these outstanding lessons, the author dispels commonly held myths about lesson observations undertaken during inspection. Descriptions and analyses of the twenty lessons provide the backdrop to stimulating discussions about pedagogy, context-specific learning and notions of excellence. Uniquely, the book focuses exclusively on outstanding practice. Derives its evidence from real lessons. Uses real practice to explore aspects of educational theory and research. Draws on the perspective of an author who has experience as one of Her Majesty's Inspectors. Relating real practice to educational theories and research, this book is essential reading for those who are training to teach or working in the lifelong learning sector.
