Risk Management Series: Site and Urban Design for Security -

Guidance Against Potential Terrorist Attacks Federal Emergency Agency,U. S. Department Security,2013-01-27 The Federal Emergency Management Agency FEMA has developed this publication Site and Urban Design for Security Guidance against Potential Terrorist Attacks to provide information and design concepts for the protection of buildings and occupants from site perimeters to the faces of buildings The intended audience includes the design community of architects landscape architects engineers and other consultants working for private institutions building owners and managers and state and local government officials concerned with site planning and design Immediately after September 11 2001 extensive site security measures were put in place particularly in the two target cities of New York and Washington However many of these security measures were applied on an ad hoc basis with little regard for their impacts on development patterns and community character Property owners government entities and others erected security barriers to limit street access and installed a wide variety of security devices on sidewalks buildings and transportation facilities The short term impacts of these measures were certainly justified in the immediate aftermath of the events of September 11 2001 but traffic patterns pedestrian mobility and the vitality of downtown street life were increasingly jeopardized Hence while the main objective of this manual is to reduce physical damage to buildings and related infrastructure through site design the purpose of FEMA 430 is also to ensure that security design provides careful attention to urban design values by maintaining or even enhancing the site amenities and aesthetic quality in urban and semi urban areas This publication focuses on site design aimed to protect buildings from attackers using vehicles carrying explosives These represent the most serious form of attack Large trucks enable terrorists to carry very large amounts of explosives that are capable of causing casualties and destruction over a range of many hundreds of yards Perimeter barriers and protective design within the site can greatly reduce the possibility of vehicle penetration Introduction of smaller explosive devices carried in suitcases or backpacks must be prevented by pedestrian screening methods Site design for security however may impact the function and amenity of the site and barrier and access control design may impact the quality of the public space within the adjacent neighborhood and community The designer's role is to ensure that public amenity and the aesthetics of the site surroundings are kept in balance with security needs This publication contains a number of examples in which the security amenity balance has been maintained through careful design and collaboration between designers and security experts Much security design work since September 11 2001 has been applied to federal and state projects and these provide many of the design examples shown At present federal government projects are subject to mandatory security guidelines that do not apply to private sector projects but these guidelines provide a valuable information resource in the absence of comparable guidelines or regulations applying to private development Operations and management issues and the detailed design of access control intrusion alarm systems electronic perimeter protection and physical security devices such as locking devices are the province of the security consultant and are not covered here except as they may impact the conceptual design of the site Limited information only is provided on some

aspects of chemical biological and radiological CBR attacks that are significant for site designers extensive discussion of approaches to these threats can be found in FEMA 426 Military Construction Appropriations for 2002: Justification of the budget estimates, Air Force United States. Subcommittee on Military Construction Appropriations,2002 **Antiterrorism and Threat Response** Ross Johnson,2020-09-22 As security professionals we tend to get seduced by the beauty of our technology We go to trade exhibitions filled with the latest innovations and marvel at what we see without understanding how it fits in with what we do It s both overwhelming and distracting like trying to learn to cook by walking through a grocery store This focus on technology teaches us to judge the effectiveness of physical protection systems by the strength of the barriers the acuity of the cameras and the sensitivity of the sensors Terrorists and criminals look for something else entirely though where we see strength they find weakness and vulnerability We are looking at the same things but not seeing the same things If we want to stop them we need to know more than how they work We need to learn to see the way they see A physical protection system that collection of people sensors barriers policies and technology is a lot like a piano and you cannot tell if a piano is in tune by looking at it You have to play it The major contribution of Antiterrorism and Threat Response Planning and Implementation 2e is the detailed instruction and practical advice on how to see the weaknesses and vulnerabilities in physical protection systems and upgrade them to meet the challenges of terrorists and criminals Key features of this book are Provides professionals with the background to understand how terrorists think and operate in order to best coordinate their counterterrorism efforts and antiterrorism strategies Examines difficult new problems facing security professionals such as the use of drones guns and the internet as a tool of both recruitment and indoctrination Teaches the reader how to step outside the security department to find and fix weaknesses and vulnerabilities in physical protection systems Introduces and discusses security management and insider threat risk management programs This is the advanced course in protecting physical assets from terrorists and criminals **Military Construction Appropriations for 2004** United States.
