source of information Moreover it may also serve as a textbook for those who are planning to start HDF in their clinics or who are studying blood purification therapies in medical schools nursing schools and even in engineering schools related to medical technologies *Daily and Nocturnal Hemodialysis* R. M. Lindsay,U. Buoncristiani,R. S. Lockridge,A. Pierratos,G. O. Ting,Claudio Ronco,2004-10 As the frequency of hemodialysis sessions has always been a concern it is not astonishing that interest in quotidian daily hemodialysis appears to be growing worldwide The main reasons for more frequent dialysis are to maximize well being and minimize both intra and interdialytic symptoms as well as to improve the treatment of patients with severe underlying medical problems particularly cardiovascular disease Moreover studies also indicate overall potential cost savings as compared with current conventional hemodialysis There are two options available namely short daily and long nightly treatments The main difference centers on the ability of the nightly regimen to remove greater amounts of phosphate and beta 2 microglobulin Even so there is no doubt that both treatments are highly preferable to conventional three times weekly dialysis Further issues which are discussed include the requirements necessary to run dialysis programs vascular access requirements and the management of complications and risks such as calcium and phosphorus control This is the first publication devoted solely to daily hemodialysis therapies Concentrating on clinical and technical issues it is an important contribution to the practical development of daily hemodialysis and is highly recommended to nephrologists nurses managers of renal programs and others involved in renal care
