

## Chapter 3.4 – Membrane Structure and Function

### How do substances move in and out of cells?

Why?

An advertisement for sports drinks, such as Gatorade, Powerade, and Vitaminwater, etc., seem to be everywhere. All of these drinks are supposed to help your body recover and replenish lost electrolytes, fluids, and vitamins after exercise. But how do the essential molecules contained in these drinks get into your cells quickly to help you recover after exercise?

**Model 1 – Simple Diffusion**

- How many different types of molecules are shown in Model 1? **Two**
- Count and record the number of triangles and circles found on each side of the membrane.  
**Triangles — 14 on left, none on right; Triangles — 14 on left, none on right**
- Which shape is larger? **Triangle**
- Describe the direction of the movement of the molecules in Model 1? **Triangle**
- Which molecules are able to pass through the semi-permeable membrane? Justify your answer.  
**The dots, because they are small and can fit through the gaps, and because they are shown equally distributed on both sides of the membrane**

**The Structure of Biological Membranes, Second Edition** Philip L. Yeagle,1991-12-05 The *Structure of Biological Membranes* provides an in depth view of the fundamental elements of biological membrane structure and function All of the important subjects of membrane structure and function are represented including the lipids the proteins and interactions between the two membrane transport membrane fusion and an integrated view of membranes as a functioning unit The well organized sophisticated discussions by recognized experts and primary literature contained in the book make *The Structure of Biological Membranes* an important volume for researchers and students alike

Concepts of Membrane Structure Ronald Aloia,2012-12-02 *Membrane Fluidity in Biology Volume 1 Concepts of Membrane Structure* covers membrane properties influenced by alterations in membrane lipid compositions and or other organizational parameters that are encompassed by the term fluidity This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed This volume then describes the phenomenon of reversed

or negative membrane images as viewed with transmission electron microscope Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles Finally the concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena

**Biological Membranes** Roger Harrison, 2013-11-22 to the Second Edition RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of Biological Membranes was published It is to take account of rapid advances in the field that we have written the present edition There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms Much more information has become available concerning the role of the plasma membrane in the cell's recognition of and response to external signals and this is reflected in the increased coverage of these topics in the book The general form of the book remains the same As before a list of suggested reading sub divided by chapter is provided and this has been expanded to include a greater proportion of original papers The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for post graduate workers entering the field of membrane research We have taken cognizance of the comments of many reviewers colleagues and students on the first edition and thank them for their contributions In particular we wish to acknowledge our colleagues R Eisinger, G D Holman, D W Hough and A H Rose Dr C R

*Structure and Dynamics of Membranes* R. Lipowsky, E. Sackmann, 1995-06-15 The first volume of the Handbook deals with the amazing world of biomembranes and lipid bilayers Part A describes all aspects related to the morphology of these membranes beginning with the complex architecture of biomembranes continues with a description of the bizarre morphology of lipid bilayers and concludes with technological applications of these membranes The first two chapters deal with biomembranes providing an introduction to the membranes of eucaryotes and a description of the evolution of membranes The following chapters are concerned with different aspects of

lipids including the physical properties of model membranes composed of lipid protein mixtures lateralphase separation of lipids and proteins and measurement of lipid protein bilayer diffusion Other chapters deal with the flexibility of fluid bilayers the closure of bilayers into vesicles which attain a large variety of different shapes and applications of lipid vesicles and liposomes Part B covers membrane adhesion membrane fusion and the interaction of biomembranes withpolymer networks such as the cytoskeleton The first two chapters of this part discuss the generic interactions of membranes from the conceptual point of view The following two chapters summarize the experimental work on two different bilayer systems The next chapter deals with the process ofcontact formation focal bounding and macroscopic contacts between cells The cytoskeleton within eucaryotic cells consists of a network of relatively stiff filaments of which three different types of filaments have been identified As explained in the next chapter much has been recently learned aboutthe interaction of these filaments with the cell membrane The final two chapters deal with membrane fusion      Membrane Structure and Function Evelyn Edward Bittar,1980      **Membrane Structure and Function.
