Women, Education, and Agency, 1600-2000 Jean Spence, Sarah Aiston, Maureen M. Meikle, 2009-09-10 Women Education and Agency 1600 2000 explores a range of topics on the history of women in educational settings around the world from the strategies of individuals seeking a personal education to organized efforts of women to pursue broader feminist goals in an educational context *Noncommutative Geometry and Optimal Transport* Pierre Martinetti, Jean-Christophe Wallet, 2016-10-26 The distance formula in noncommutative geometry was introduced by Connes at the end of the 1980s It is a generalization of Riemannian geodesic distance that makes sense in a noncommutative setting and provides an original tool to study the geometry of the space of states on an algebra It also has an intriguing echo in physics for it yields a metric interpretation for the Higgs field In the 1990s Rieffel noticed that this distance is a noncommutative version of the Wasserstein distance of order 1 in the theory of optimal transport More exactly this is a noncommutative generalization of Kantorovich dual formula of the Wasserstein distance Connes distance thus offers an unexpected connection between an ancient mathematical problem and the most recent discovery in high energy physics The meaning of this connection is far from clear Yet Rieffel's observation suggests that Connes distance may provide an interesting starting point for a theory of optimal transport in noncommutative geometry This volume contains several review papers that will give the reader an extensive introduction to the metric aspect of noncommutative geometry and its possible interpretation as a Wasserstein distance on a quantum space as well as several topic papers **The Times Index** ,2009 Indexes the Times Sunday times and magazine Times literary supplement Times educational supplement Times educational supplement Scotland and the Times higher education supplement **Subject Guide to Books in Print** ,1996 Current Index to Journals in Education ,1987 **A Computational Differential Geometry Approach to Grid Generation** Vladimir D. Liseikin, 2013-03-14 Grid technology whose achievements have significant impact on the efficiency of numerical codes still remains a rapidly advancing field of computational and applied mathematics New achievements are being added by the creation of more sophisticated techniques modification of the available methods and implementation of more subtle tools as well as the results of the theories of differential equations calculus of variations and Riemannian geometry being applied to the formulation of grid

models and analysis of grid properties The development of comprehensive differential and variational grid generation techniques reviewed in the monographs of J F Thompson Z U A Warsi C W Mastin P Knupp S Steinberg V D Liseikin has been largely based on a popular concept in accordance with which a grid model realizing the required grid properties should be formulated through a linear combination of basic and control grid operators with weights A typical basic grid operator is the operator responsible for the well posedness of the grid model and construction of unfolding grids e g the Laplace equations generalized Laplace equations for surfaces or the functional of grid smoothness which produces fixed nonfolding grids while grid clustering is controlled by source terms in differential grid formulations or by an adaptation functional in variational models However such a formulation does not obey the fundamental invariance laws with respect to parameterizations of physical geometries It frequently results in cumbersome governing grid equations whose choice of weight and control functions provide conflicting grid requirements **Whitaker's Cumulative Book List** ,1964 Students and universities Great Britain: Parliament: House of Commons: Innovation, Universities, Science and Skills Committee,2009-08-02 Incorporating HC 370 **Hyperbolic Partial Differential Equations** Matthew Witten,2014-05-23 Hyperbolic Partial Differential Equations III is a refereed journal issue that explores the applications theory and or applied methods related to hyperbolic partial differential equations or problems arising out of hyperbolic partial differential equations in any area of research This journal issue is interested in all types of articles in terms of review mini monograph standard study or short communication Some studies presented in this journal include discretization of ideal fluid dynamics in the Eulerian representation a Riemann problem in gas dynamics with bifurcation periodic McKendrick equations for age structured population growth and logistic models of structured population growth A number of book reviews are also included This journal provides an interdisciplinary forum for the presentation of results not included in other particular journals and thus will be beneficial to those interested in this field of study Whitaker's Books in Print ,1998
