Stone, 1987-09-30 The objective of this dissertation is to advance the state of the art in the kinematic modeling identification and control of robotic manipulators with rigid links in an effort to improve robot kinematic performance The positioning accuracy of commercially available industrial robotic manipulators depends upon a kinematic model which describes the robot geometry in a parametric form Manufacturing error in the machining and assembly of manipulators lead to discrepancies between the design parameters and the physical structure Improving the kinematic performance thus requires the identification of the actual kinematic parameters of each individual robot The identified kinematic parameters are referred to as the arm signature Existing robot kinematic models such as the Denavit Hartenberg model are not directly applicable to kinematic parameter identification In this dissertation we introduce a new kinematic model called the 5 Model which is applicable to kinematic parameter identification and use it as the foundation for our development of a general technique for identifying the kinematic parameters of any robot with rigid links InfoWorld , 1980-11-24 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects MC88100 Risc Microprocessor User's Manual Motorola, Inc, 1990 Motorola's official documentation for the 88100 the chip used in concurrent programming and supercomputing that can perform up to 11 different operations at one time and is supported by 88 OPEN a consortium of 26 companies developing applications for this chip InfoWorld , 1981-04-13 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects
