A special emphasis is given to human computer interaction and its implementation for a wide range of purposes such as healthcare, aerospace, telecommunication, and education among others. The human aspects are analyzed in detail. Timely studies on human centered design, wearable technologies, social and affective computing, augmented virtual and mixed reality, simulation, human rehabilitation, and biomechanics represent the core of the book. Emerging technology applications in business, security, and infrastructure are also critically examined, thus offering a timely, scientifically grounded, but also professionally oriented snapshot of the current state of the field. The book is based on contributions presented at the 2nd International Conference on Human Interaction and Emerging Technologies Future Applications (IHET AI 2020) held on April 23-25 in Lausanne, Switzerland. Each chapter is accompanied by frameworks that lead to both analysis and awareness of legal statutes, ethical principles, regulatory practice acts, and professional practice standards that encourage responsible reasoning and conduct. Contemporary journal articles can also be found in every chapter to help readers make connections between content and clinical practice. The text also includes assessment tools, sample models for ethical decision-making, writing about moral issues, and sample course design and delivery for teaching ethics. Included in the instructor's materials are nearly 50 cases to promote critical thinking, as well as learning activities for each chapter. Included with the text are online supplemental materials for faculty use in the classroom. Covering all levels of ethical practice, from the entry
