

- d. Both animals have identical genetic information.

Base your answers to questions 4 through 6 on the information below and on your knowledge of biology.

Birds Are Evolving Rapidly—Today

Many people think that evolutionary change occurs so slowly, we cannot observe it directly. Not so! For example today in the U.S., house finches are evolving rapidly and visibly. In 1941, some captive house finches from California escaped near New York City. They spread rapidly and are now found across most of the United States and in southern Canada. Many of these areas have cold, snowy winters, during which many birds die. The finches have evolved, because those that survive differ from their parents. Size is one example.

Male house finches in recently established populations in Michigan and Montana are larger than the males that escaped. Large males outcompete small males for food, so are more likely to survive the winter. They also pair more successfully with females early in the spring.

Smaller females survive better than larger females as nestlings. Also, because they need less food to maintain their own bodies, they can breed earlier in spring. Females that breed earlier raise more young than those that start breeding later. Rapid evolution of house finches reminds us that evolutionary changes are occurring visibly all around us.

4. **Explain** why it is an advantage for female finches to be small.

5. **Explain** why the population of large male house finches in Michigan and Montana continues to increase.

6. An example of competition between members of two different species is
- mold growing on a dead tree that has fallen in the forest.
 - purple loosestrife plants growing in the same wet areas as cattail plants.

The Odyssey of a Woman Field Scientist JEAN H. LANGENHEIM, 2010-02-22. Here Jean Langenheime presents her odyssey as a woman field scientist who crossed boundaries of botany, geology, and chemistry in doing ecological studies. The book includes almost two hundred photographs and maps and uses a unique timeline as context for her story in relation to relevant historical events, significant changes in the status of women, and milestones in ecology from the 1920s to the present. Her research spans five continents and ranges from arctic-alpine to tropical environments. It includes many adventures such as a forced plane landing in Amazonia and working in the midst of a coup d'état in Colombia, and interactions with diverse cultures from Alaska Eskimo to Ghanaian family life. She tells the story of a rich life of learning and discovery through difficult and good times which she has shared with her husband and later with her students, colleagues, and many friends many around the world.

INITIAL REVIEW STATEMENTS Anyone who reads this rich and wonderfully interesting memoir will be inspired by what Jean Langenheime has accomplished scientifically and personally during her long and distinguished career at the interface of multiple scientific fields. This is more than a personal memoir by a leading scientist. It is a deeply insightful reflection on how major scientific disciplines have developed over the past half century and how the culture of scientific research itself has changed. John Thompson, Distinguished Professor of Ecology and Evolution, University of California Santa Cruz, quoted in UCSC press release <http://press.ucsc.edu/text.asp?pid=3771>. The title of this good read is truly apropos; it is an odyssey of the mind as well as life of a self-confessed adventurous woman, someone always open to the next chapter in an ever-changing life lived during a period of significant social and technological changes. There's a solid dose of real scientific research and discovery tempered by the author's vivid descriptions of her travels, of the wonders of the natural world, and of the cultures she encounters in some amazing places. She finds herself provocatively you may recognize and view elements of your own life in ways you never thought about before. Susan Martin, retired researcher, US Department of Agriculture, Colorado State University. I liked very much your life metaphor about weaving threads in your life tapestry. It was delightful to read how those threads were constructed and woven. Your life has been very rich, impacting and inspiring many people with your thoughts and action. Francisco Espinosa Garcia, Professor, National University of Mexico, Center for Ecosystem Research, Morelia, Mexico.

What Is Adaptive about Adaptive Memory? Bennett L. Schwartz, 2014. Human memory, like other biological systems, has been subject to natural selection over the course of evolution. The goal of this volume is to present the best theoretical and empirical work on the adaptive nature of memory. The volume features current and relevant work of cognitive, developmental, and comparative psychologists.
