of existing guidelines The consultation was attended by 15 experts one resource person and FAO staff The consultation was organized into both plenary and group discussions The Experts agreed on a proposed methodology for identifying and selecting the lessons learned from strategies and experiences of aquaculture development worldwide a methodology for documenting and analysing the lessons learned a list of thematic modules a gap analysis between existing guidelines and needs for new ones and an updated roadmap for the development of the Sustainable Aquaculture Guidelines *Technical guidance for the development of the growing area aspects of bivalve mollusc sanitation programmes* ,2021-08-25 WHO *recommendation on vaginal preparation with antiseptic agents for women undergoing caesarean section* ,2021-06-18 While the evidence on vaginal preparation before caesarean section was largely derived from trials using povidone iodine benefit was demonstrated overall for any antiseptic either povidone iodine or chlorhexidine gluconate versus no antiseptic Included trials used varying concentrations of chlorhexidine gluconate 0.05% to 0.25% or povidone iodine 1% to 10% and the base aqueous or alcohol was not described However the Guideline Development Group agreed that alcohol based antiseptic solutions should not be used for vaginal preparation because of concerns around irritation of mucosa This recommendation pertains to all women undergoing caesarean section regardless of their baseline risk of infectious morbidity following surgery i.e. for caesarean section in women before or during labour and women with intact or ruptured membranes Whilst available trials were not clear on the timing of vaginal preparation relative to the caesarean section the Guideline Development Group suggested that vaginal preparation should be performed as close to the start of caesarean section as possible e.g. directly following preoperative urinary bladder catheterization to minimize the woman's discomfort WHO *recommendations on choice of antiseptic agent and method of application for preoperative skin preparation for caesarean section* ,2021-06-18 There was a lack of evidence to recommend a specific concentration of chlorhexidine gluconate however most trials included used 2% chlorhexidine gluconate in 70% alcohol Maternal allergy to alcohol based chlorhexidine gluconate must be excluded before surgery In women with no previous history of allergy to alcohol based chlorhexidine gluconate it should be noted that chlorhexidine gluconate can cause skin irritation A standard preoperative skin preparation technique that is appropriate for the intended skin incision must be followed As alcohol is highly flammable alcohol based antiseptic preparations may ignite if used in the presence of diathermy and they must be allowed to dry by evaporation It is advisable to ensure that the drapes are not saturated with alcohol or that the alcohol based solution has not formed a pool underneath the woman before starting surgery Particular care should be taken at emergency caesarean section Where chlorhexidine gluconate is not available other antiseptic agent such as povidone iodine can be considered a suitable antiseptic agent for preoperative skin preparation although it is not as effective as alcohol based chlorhexidine gluconate The Guideline Development Group noted that the current recommendation is consistent with the 2016 WHO global guidelines on the prevention of surgical site infection which recommends chlorhexidine gluconate alcohol based antiseptic solutions for surgical site skin preparation in individuals

undergoing surgical procedures      *Seismic Rehabilitation of Buildings* ,1993-07      **Strengthening Climate Resilience**
