Muhanji, Alison E. Flint, Amro M. Farid, 2019-02-20 This open access book explores the collision between the sustainable energy transition and the Internet of Things IoT In that regard this book's arrival is timely Not only is the Internet of Things for energy applications herein called the energy Internet of Things eIoT rapidly developing but also the transition towards sustainable energy to abate global climate is very much at the forefront of public discourse It is within the context of these two dynamic thrusts digitization and global climate change that the energy industry sees itself undergoing significant change in how it is operated and managed This book recognizes that they impose five fundamental energy management change drivers 1 the growing demand for electricity 2 the emergence of renewable energy resources 3 the emergence of electrified transportation 4 the deregulation of electric power markets 5 and innovations in smart grid technology Together they challenge many of the assumptions upon which the electric grid was first built The goal of this book is to provide a single integrated picture of how eIoT can come to transform our energy infrastructure This book links the energy management change drivers mentioned above to the need for a technical energy management solution It then describes how eIoT meets many of the criteria required for such a technical solution In that regard the book stresses the ability of eIoT to add sensing decision making and actuation capabilities to millions or perhaps even billions of interacting smart devices With such a large scale transformation composed of so many independent actions the book also organizes the discussion into a single multi layer energy management control loop structure Consequently much attention is given to not just network enabled physical devices but also communication networks distributed control decision making and finally technical architectures and standards Having gone into the detail of these many simultaneously developing technologies the book returns to how these technologies when integrated form new applications for transactive energy In that regard it highlights several eIoT enabled energy management use cases that fundamentally change the relationship between end users utilities and grid operators Consequently the book discusses some of the emerging applications for utilities industry commerce and residences The book concludes that these eIoT applications will transform today's grid into one that is much more responsive dynamic adaptive and flexible It also concludes that this transformation will bring about new challenges and opportunities for the cyber physical economic performance of the grid and the business models of its increasingly growing number of participants and stakeholders Power System Restoration M. M. Adibi, 2000-06-22 At a time when bulk power systems operate close to their design limits the restructuring of the electric power industry has created vulnerability to potential blackouts Prompt and effective power system restoration is essential for the minimization of downtime and costs to the utility and its customers which mount rapidly after a system blackout Power System Restoration meets the complex challenges that arise from the dynamic capabilities of new technology

in areas such as large scale system analysis communication and control data management artificial intelligence and allied disciplines It provides an up to date description of the restoration methodologies and implementation strategies practiced internationally The book opens with a general overview of the restoration process and then covers Techniques used in restoration planning and training Knowledge based systems as operational aids in restoration Issues associated with hydro and thermal power plants High and extra high voltage transmission systems Restoration of distribution systems Power System Restoration is essential reading for all power system planners and operating engineers in the power industry It is also a valuable reference for researchers practicing power engineers and engineering students Sponsored by IEEE Power Engineering Society
