the strengths of SSF and the synergies that occur with other marine sectors it also presents cases of failure in which collective action and policy have actually contributed to a weakening of the sector In this context the book shows how governmental policies toward SSF vary considerably from country to country in a way that is not entirely consistent with European policies *Floating Architecture 3* Horst Stopp, Peter Strangfeld, 2021-10 Floating architecture is not only an issue for luxurious tourism but with the climatic change the building of floating structures becomes relevant for many areas in the world In regions with rising sea levels frequent flooding or thawing permafrost floating structures can be a solution to adapt existing settlement areas to these new conditions The self sufficient energy and supply systems required for floating settlements can also be used in rural areas with a lot of migration The collection presents papers of conferences organized by the Faculty of Architecture and Urban Planning at Brandenburg University of Technology Cottbus Senftenberg BTU
