throughout my teaching career with great success Students commented that they were what made the course stand out from other social studies classes that they had and that they really helped them learn better

Patent Law for Computer Scientists Daniel Closa, Alex Gardiner, Falk Giemsa, Jörg Machek, 2010-02-03 Patent laws are different in many countries and inventors are sometimes at a loss to understand which basic requirements should be satisfied if an invention is to be granted a patent This is particularly true for inventions implemented on a computer While roughly a third of all applications and granted patents relate in one way or another to a computer applications where the innovation mainly resides in software or in a business method are treated differently by the major patent offices in the US USPTO Japan JPO and Europe EPO The authors start with a thorough introduction into patent laws and practices as well as in related intellectual property rights which also explains the procedures at the USPTO JPO and EPO and in particular the peculiarities in the treatment of applications centering on software or computers Based on this theoretical description next they present in a very structured way a huge set of case studies from different areas like business methods databases graphical user interfaces digital rights management and many more Each set starts with a rather short description and claim of the invention then explains the arguments a legal examiner will probably have and eventually refines the description step by step until all the reservations are resolved All of these case studies are based on real world examples and will thus give an inexperienced developer an idea about the required level of detail and description he will have to provide Together Closa Gardiner Giemsa and Machek have more than 70 years experience in the patent business With their academic background in physics electronic engineering and computer science they know about both the legal and the subject based subtleties of computer based inventions With this book they provide a guide to a patent examiner's way of thinking in a clear and systematic manner helping to prepare the first steps towards a successful patent application
