

Q.19 Identify the fluvial topography. Classify them as erosional or depositional features.

3

Q.20 Why Northern plains are densely populated? If you move from Uttarakhand to West Bengal, name the sections of Northern plains you will cross. Explain any one.

3

Q.21 Read the extract and answer the questions given below

3

If you work out the latitudinal and longitudinal extent of India, they are roughly about 30 degrees, whereas the actual distance measured from north to south extremity is 3,214 km, and that from east to west is only 2,933 km.

This difference is based on the fact that the distance between two longitudes decreases towards the poles whereas the distance between two latitudes remains the same everywhere.

From the values of latitude, it is understood that the southern part of the country lies within the tropics and the northern part lies in the sub-tropical zone or the warm temperate zone. This location is responsible for large variations in land forms, climate, soil types and natural vegetation in the country.

Now, let us observe the longitudinal extent and its implications on the Indian people. From the values of longitude, it is quite discernible that there is a variation of nearly 30 degrees, which causes a time difference of nearly two hours between the easternmost and the westernmost parts of our country.

A) How the distance between latitude and longitude varies from equator to poles?

B) What types of variations are caused due to large latitudinal extension?

C) What is the local time interval between Gujarat and Arunachal Pradesh?
