Geometric Sequences

In order to generate any term in a geometric sequence, we can use the nth **term**.

nth **term** = $ar^n - 1$

a is the first term of the sequence

r is the common ratio

n is the position of the term

1 Substitute $n = 1$ into the nth term to calculate the first term a

2 Substitute $n = 2$ into the nth term to calculate the second term

3 Continue to substitute values for n until all the required terms of the sequence are calculated
