Comparative Risk Assessment and Environmental

Decision Making Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

Cafeo, 2010-03-11 7 1 1 Background Uncertainty can be considered as the lack of adequate information to make a decision It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems In general certainty can be broadly classified into three types Bae et al 2004 Ha Rok 2004 Klir and Wierman 1998 Oberkampf and Helton 2002 Sentz 2002 The first one is aleatory uncertainty also referred to as stochastic uncertainty or inherent certainty it results from the fact that a system can behave in random ways For example the failure of

an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time One cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered available The second one is epistemic uncertainty also known as subjective uncertainty or reducible certainty it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process By gaining information about the system or environmental factors one can reduce the epistemic uncertainty For example a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty

Encyclopedia of Business Analytics and Optimization Wang, John, 2014-02-28 As the age of Big Data emerges it becomes necessary to take the five dimensions of Big Data volume variety velocity volatility and veracity and focus these dimensions towards one critical emphasis value The Encyclopedia of Business Analytics and Optimization confronts the challenges of information retrieval in the age of Big Data by exploring recent advances in the areas of knowledge management data visualization interdisciplinary communication and others Through its critical approach and practical application this book will be a must have reference for any professional leader analyst or manager interested in making the most of the knowledge resources at their disposal

Conceptual Modeling - ER 2010 Jeffrey Parsons, Motoshi Saeki, Peretz Shoval, Carson Woo, Yair Wand, 2010-10-27 This publication comprises the proceedings of the 29 International Conference on Conceptual Modeling ER 2010 which was held this year in Vancouver British Columbia Canada Conceptual modeling can be considered as lying at the confluence of the three main aspects of information technology applications the world of the stakeholders and users the world of the developers and the technologies available to them Conceptual models provide abstractions of various aspects related to the development of systems such as the application domain user needs database design and software specifications These models are used to analyze and define user needs and system requirements to support communications between stakeholders and developers to provide the basis for systems design and to document the requirements for and the design rationale of

developed systems Because of their role at the junction of usage development and technology conceptual models can be very important to the successful development and deployment of IT applications Therefore the research and development of methods techniques tools and languages that can be used in the process of creating maintaining and using conceptual models is of great practical and theoretical importance Such work is conducted in academia research institutions and industry Conceptual modeling is now applied in virtually all areas of IT applications and spans varied domains such as organizational information systems systems that include specialized data for spatial temporal and multimedia applications and biomedical applications

Management of Information Systems Maria Pomffyova,2018-10-24 Management functions were developed first as a systematic step to carry out management activities while implementation of the information components followed as part of management elements The authors point out that the use of the possibilities and advantages of quantitatively supported managerial decisions gives managers the ability to quantify the impacts of both technical hard and subjective soft constraints and improve managerial decision making processes that would otherwise be based mostly on personal intuition and experience To achieve the goals and benefits of excellent performance it is necessary to design and develop integrated models that would coordinate management functions and information system components as an integrated process These facts are presented in various case studies
