

(PN Exit Hesi Exam Study Guide)

What symptoms may indicate improper control of the thyroid gland and may predispose the patient to the postoperative complication of "thyroid crisis"?

- If the patient appears nervous, tense, and apprehensive, this should be reported to the surgeon.

What is kept by the bedside post-op thyroidectomy in case severe respiratory complications occur?

- A tracheostomy set.

What post-op symptom is seen after a thyroidectomy indicating damage to the vocal cords?

- Persistent hoarseness or loss of voice.

What type of enema is the safest to used and is the only kind used on infants? What type of enema must only be done once due to risk of water intoxication?

- Normal saline enemas are the safest. Tap water enemas are only done once.

What are signs that the patient isn't tolerating the enema well and it needs to be stopped?

- Abdominal pain more than a pressure sensation, abdominal cramping, abdominal distention, or rectal bleeding.

How far is an enema inserted into the patient's anus? How high should the enema bag be held above the anus?

- 3 to 4 inches. The IV pole is positioned so that the enema bag is 12 inches above the anus and approximately 18 inches above the mattress.

Which do you suction first in an infant, mouth or nose?

- Suction the mouth first because the infant may gasp when the nose is suctioned, causing aspiration of mucus or fluid in the mouth.
