Highest Ranking Journals Impact Factor:

Multidimensional Journal Evaluation Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011.

Journals of the Century Tony Stankus, 2019-12-06 This book first published in 2002 gathers some of America's top subject expert librarians to determine the most influential journals in their respective fields. 32 contributing authors reviewed journals from over twenty countries that have successfully shaped the evolution of their individual specialties worldwide. Their choices reflect the history of each discipline or profession, taking into account rivalries between universities, professional societies for profit and not for profit publishers, and even nation states and international ideologies in each journal's quest for reputational dominance. Each journal was judged using criteria such as longevity of publication, foresight in carving out its niche, ability to attract none are in the employ of any publisher but each is fully credentialed and well published, and many are award winners. The authors guide college and professional school librarians on limited budgets via an exposition of their analytical and critical winnowing process in determining the classic resources for their faculty students and working professional clientele.

Toward Quality Assurance and Excellence in Higher Education Ahmed Odeh Al Jaber, 2022-09-01 Quality Assurance is not a new concept in the education sector in general and higher education in particular, though it is becoming increasingly more relevant and important. Higher education helps to improve an individual's quality of life by enabling them to inflate their knowledge and expertise to grasp abstract concepts and theories and to raise their awareness of the world and their community, and as such the assurance of quality is becoming more pivotal in the whole education process. There is no simple definition of the concept of quality in education, though numerous models and theories have been devised. *Toward Quality Assurance and Excellence in Higher Education* is a new episode of the Quality Assurance perception in higher education which identifies the quality culture and orientation from the beginning, integrating crucial factors to build a pyramid of higher education excellence. The book compares concepts from the main theories of Quality Assurance, management and control when they are applied to educational systems in higher education. The book also presents a new model of excellence in higher education. Excellence is an architecture of building blocks that comes with process, performance, effectiveness, harmony, and collaboration, which should be incorporated in a quality-oriented concept of a sustainable excellence of higher education. The model integrates four main facets: the Educational System, Quality Assurance, Managing and Control, Strategic Planning, and Globalization. Also presented are international best practices in quality assurance in higher education from Japan and Finland.

Measuring Up in Higher Education Anthony Welch, Jun Li, 2021-05-03 This book examines the quality assessment movement in academic scholarship as globalization prompts a search for global measures of university services and output It gauges productivity in terms of universal publication metrics and considers ranking and research productivity from a comparative perspective The book considers the use of the impact factor as a gauge of publication value noting that this is less important in countries lacking central government appropriations to universities and to research It argues that pressure to publish in certain journals and to research topics of interest to English language readers has been felt differentially in English language systems compared to others but also that performance pressures fall more on younger more junior contract staff than on senior and tenured professors It problematizes international comparisons of quality and analyses the benefits of a zone of ideas and metrics in a common language promoting international mobility efficiency collaboration but also the costs which are rarely borne equally across countries languages and cultures The book provides a strong evidence based contribution to major debates in contemporary higher education reforms and the measurement of academic output
