- First, your shutter speed must be set to its “X” (sync) setting.
- Use the light meter to calculate a proper exposure without the flash.
- Determine your camera-to-subject distance and check the flash for the proper aperture setting.
- **This is the distance for normal flash, not fill flash.** Normal flash would be too bright. You must now adjust the light so the brightness is cut.
- ***Remember: adjust the flash brightness and not the camera's exposure.***
