Bishop, Hazel Tan, Tasos N Barkatsas, 2014-09-20 This book presents a research focus on diversity and inclusivity in mathematics education. The challenge of diversity largely in terms of student profiles or contextual features is endemic in mathematics education and is often argued to require differentiation as a response. Typically different curricula, text materials, task structures or pedagogies are favoured responses but huge differences in achievement still result. If we in mathematics education seek to challenge that status quo, more research must be focussed not just on diversity but also on the inclusivity of practices in mathematics education. The book is written by a group of experienced collaborating researchers who share this focus. It is written for researchers, research students, teachers and in-service professionals who recognise both the challenges but also the opportunities of creating and evaluating new inclusive approaches to curriculum and pedagogy, ones that take for granted the positive values of diversity. Several chapters report new research in this direction. The authors are part of or have visited with the mathematics education staff of the Faculty of Education at Monash University in Melbourne, Australia. The chapters all focus on the ideas of development in both research and practice, recognising that the current need is for new inclusive approaches. The studies presented are set in different contexts including Australia, China, the United States and Singapore.

Cambridge International AS and A Level Mathematics: Pure Mathematics 2 and 3 Revised Edition Coursebook Hugh Neill, Douglas Quadling, Julian Gilbey, 2016-07-14 Cambridge AS and A Level Mathematics is a revised series to ensure full syllabus coverage. This coursebook has been revised and updated to ensure that it meets the requirements for the Pure Mathematics 2 and 3 P2 and P3 units of Cambridge AS and A Level Mathematics 9709. Additional materials have been added to sections on logarithmic and exponential functions, the derivative of $\tan x$ and vectors. All of the review questions have been updated to reflect changes in the style of questions asked in the course.

Teaching STEM in the Secondary School Frank Banks, David Barlex, 2014-07-17 The skills, knowledge and understanding of the subjects involved in STEM (Science, Technology, Engineering and Mathematics) are vital for all young people in an increasingly science and technology driven society. This book looks at the purpose and pedagogy of STEM teaching and explores the ways in which STEM subjects can interact in the curriculum to enhance student understanding, achievement and motivation. By reaching outside their own classroom, teachers can collaborate across subjects to enrich learning and help students relate school science, technology and maths to the wider world. Packed with ideas and practical details for teachers of STEM subjects, this book considers what the STEM subjects contribute separately to the curriculum and how they relate to each other in the wider education of secondary school students. It describes and evaluates different curriculum models for STEM, suggests ways in which a critical approach to the pedagogy of the classroom, laboratory and workshop can support STEM for all students, addresses the practicalities of introducing, organising and sustaining STEM related activities in the secondary school, looks to ways schools can manage and sustain STEM approaches in the long term. This timely new text is essential reading for trainee and practising teachers who wish to make the learning of Science, Technology, Engineering and

Mathematics an interesting motivating and exciting experience for their students

Chinese Students in UK Further Education Rosemary A. Reynolds, 2017-12-15 Chinese students in the UK have been increasing in number for many years yet competition from other Western educators and increasing investment in China's own education system has led to concern that UK institutions may soon see a decline in their market share Dr Reynolds addresses this issue in *Chinese Students in UK Further Education* by attempting to understand students' experiences from their perspective Beginning with an exploration of why these students choose to come and study in the UK and why they are coming at younger ages the book goes on to discuss topics such as risk technology and diversity in order to understand which factors have the greatest influence on where they choose to study and whether they choose to remain at an institution Drawing on data from two different education institutions providers of GCSE A level programmes for students aged 16-18 years Dr Reynolds attempts to understand what these students experience during their studies how they manage new social relationships and whether upon course completion they achieved the results they desired at the outset Moreover the book aims to ascertain whether the students feel in hindsight that the decision to risk investing in UK further education was right and what they might communicate about UK study to contacts in China and elsewhere The book examines what further education institutions do well and where they might improve to help develop Chinese students' educational experiences As such it will be essential reading for academics researchers and postgraduates in the fields of further education sociology of education international and intercultural education and mobility studies
