## June 2013 Memo Mathematics:

**Caught in the Act** Cyril Julie, Lorna Holtman, Charles R. Smith, 2019-12-11 The research reported in *Caught in the Act* draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers **Singularity Theory for Non-Twist KAM Tori** A. González-Enríquez, A. Haro, R. de la Llave, 2014-01-08 In this monograph the authors introduce a new method to study bifurcations of KAM tori with fixed Diophantine frequency in parameter dependent Hamiltonian systems It is based on Singularity Theory of critical points of a real valued function which the authors call the potential The potential is constructed in such a way that nondegenerate critical points of the potential correspond to twist invariant tori i e with nondegenerate torsion and degenerate critical points of the potential correspond to non twist invariant tori Hence bifurcating points correspond to non twist tori [A Complete Classification of the Isolated Singularities for Nonlinear Elliptic Equations with Inverse Square Potentials](#) Florica C. Cîrstea, 2014-01-08 In particular for  $b \neq 0$  and  $0$  we find a sharp condition on  $h$  such that the origin is a removable singularity for all non negative solutions of  $\Delta u = h$  thus addressing an open question of Vázquez and Vron *An Excursion Through Discrete Differential Geometry* American Mathematical Society. Short Course, Discrete Differential Geometry, 2020-09-02 Discrete Differential Geometry DDG is an emerging discipline at the boundary between mathematics and computer science It aims to translate concepts from classical differential geometry into a language that is purely finite and discrete and can hence be used by algorithms to reason about geometric data In contrast to standard numerical approximation the central philosophy of DDG is to faithfully and exactly preserve key invariants of geometric objects at the discrete level This process of translation from smooth to discrete helps to both illuminate the fundamental meaning behind geometric ideas and provide useful algorithmic guarantees This volume is based on lectures delivered at the 2018 AMS Short Course Discrete Differential Geometry held January 8-9 2018 in San Diego California The papers in this volume illustrate the principles of DDG via several recent topics discrete nets discrete differential operators discrete mappings discrete conformal geometry and discrete optimal transport [On the Theory of Weak Turbulence for the Nonlinear Schrödinger Equation](#) M. Escobedo, J. J. L. Velázquez, 2015-10-27 The authors study the Cauchy problem for a kinetic equation arising in the weak turbulence theory for the cubic nonlinear Schrödinger equation They define suitable concepts of weak and mild solutions and prove local and global well posedness results Several

qualitative properties of the solutions including long time asymptotics blow up results and condensation in finite time are obtained The authors also prove the existence of a family of solutions that exhibit pulsating behavior **Weighted**

**Bergman Spaces Induced by Rapidly Increasing Weights** Jose Angel Pelaez, Jouni Rattya, 2014-01-08 This monograph is devoted to the study of the weighted Bergman space  $A_{p, \omega}$  of the unit disc  $\mathbb{D}$  that is induced by a radial continuous weight  $\omega$  satisfying  $\lim_{r \rightarrow 1} \int_r^1 \omega(s) ds = 0$  Every such  $A_{p, \omega}$  lies between the Hardy space  $H^p$  and every classical weighted Bergman space  $A_{p, \alpha}$  Even if it is well known that  $H^p$  is the limit of  $A_{p, \alpha}$  as  $\alpha \rightarrow 1$  in many respects it is shown that  $A_{p, \omega}$  lies closer to  $H^p$  than any  $A_{p, \alpha}$  and that several finer function theoretic properties of  $A_{p, \alpha}$  do not carry over to  $A_{p, \omega}$  [Lie Algebras, Lie Superalgebras, Vertex Algebras and Related Topics](#) Kailash C. **Volume 3: 1957-1987** James G. Greenlee, 2015-05-01 In 1957 McMaster was a small Baptist enclave of traditional higher learning on the western outskirts of Hamilton Thirty years later it was home to the only nuclear reactor on a Commonwealth campus and had cultivated a thriving engineering program and a world class medical school In the third volume of the university's history James Greenlee illuminates the core ideas driving ambitions and occasionally sharp conflicts that marked this startling transition Greenlee offers a tightly focused study of the planning people and events that gave McMaster its distinctive and bold personality At the heart of these developments stood President Harry Thode whose master plan forged a research intensive institution of medium size but one capable of surpassing the largest institutions in carefully selected fields Despite dramatic ups and downs the remarkable persistence of this model is the key to understanding modern McMaster For readers interested in the problems of mass education in a democratic age the origins of revolutionary approaches to medical training or the tangled relations among a university its community and the province this volume like the McMaster leaders it follows has a story to tell **Global Flood Hazard** Guy J-P. **Proof of the 1-Factorization and Hamilton Decomposition Conjectures** Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05 In this paper the authors prove the following results via a unified approach for all sufficiently large  $n$

Oliver,2016-01-25 The author classifies all reduced indecomposable fusion systems over finite groups of sectional rank at most The resulting list is very similar to that by Gorenstein and Harada of all simple groups of sectional rank at most But this method of proof is very different from theirs and is based on an analysis of the essential subgroups which can occur in the fusion systems      **Disorder and the Disinformation Society** Jonathan Paul Marshall,James Goodman,Didar

Zowghi,Francesca da Rimini,2015-04-17 This book is the first general social analysis that seriously considers the daily experience of information disruption and software failure within contemporary Western society Through an investigation of informationalism defined as a contemporary form of capitalism it describes the social processes producing informational disorder While most social theory sees disorder as secondary pathological or uninteresting this book takes disordering processes as central to social life The book engages with theories of information society which privilege information order offering a strong counterpoint centred on disinformation Disorder and the Disinformation Society offers a practical agenda arguing that difficulties in producing software are both inherent to the process of developing software and in the social dynamics of informationalism It outlines the dynamics of software failure as they impinge on of information workers and on daily life explores why computerized finance has become inherently self disruptive asks how digital enclosure and intellectual property create conflicts over cultural creativity and disrupt informational accuracy and scholarship and reveals how social media can extend but also distort the development of social movements      *Memorandum* - ,1963
