Pedigree Query, Visualization, and Genetic Calculations Tool Murat Kurtcephe, 2012 Family trees and pedigrees are becoming increasingly important in human genetics as pedigrees can be utilized to trace a genetic disorder or trait and to calculate disease risks In this study we present a new system for pedigree query visualization and genetic calculations A novel query interface is proposed where users can form complicated queries via an easy to use graphical user interface with no need for any knowledge of high level query language such as SQL or XPath A graph encoding method called NodeCodes enables our system to efficiently evaluate relationship based queries without traversing the graph or using recursive query calls The visualization of the pedigree data as a dynamic drawing enables the analysis of query results in a more understandable form The system also provides genetic calculations including inbreeding kinship and identity coefficients Proposed system performs these calculations by using path based formulas coupling with NodeCodes to achieve efficiency and scalability *Pedigree Books* Pedigree Books, 1958
