

INTRODUCTION

GENERAL

This section has a description and the service procedures for the parts of the frame. These parts include the counterweight, overhead guard, mast and load wheels, and the transaxles. The location for labels is also shown.

DESCRIPTION (See FIGURE 1)

The frame is a single weldment with mountings for the counterweight, overhead guard, mast and load wheels, and the transaxles. The hydraulic tank is part of the frame. The battery cover opens on hinges to give access to the battery compartment. An access panel on the top/rear of the counterweight gives access to the electronic controller. The floor plates must be removed for access to the traction motors on the transaxles.

The weight of the battery is a major part of the counterweight system on an electric lift truck. Each model of lift truck has a cast iron counterweight with the weight necessary for the indicated capacity. A slot in the overhead guard permits removal of the battery without removing the overhead guard. Plates may be added under the battery as required on some of models.

The hydraulic pump and motor, steering pump and motor, drive motors and transaxles and the hydraulic tank are under the floor plates in the operator compartment. The floor plates are held in position by tabs. The plates can be removed to give access to hydraulic components after removing the single piece floor mat. The hydraulic control valve is fastened to the front of the battery compartment. Two covers protect the control valve and control linkage. The covers are fastened in position by machine screws. The top covers are locked in place and must be released and swung open before attempting to open the battery cover.
