Maths Lit 11 November 2013:

Education Game Changers Karen E. Starr, 2014-12-08 *Education Game Changers* is written for an international readership. This book refers to all education levels and sectors and builds on research in educational leadership, education business, and organizational change. Karen E. Starr describes policy paradoxes challenging the sustainability of educational provision as we know it and the imperatives they present for educational leadership, business, and governance. This book critiques the paradoxical education policy context while exploring alternative futures they may spawn. It ponders both possibilities and pitfalls that cannot be ignored by instrumental players such as governments, policy makers, educational leaders, and business managers, researchers, and analysts. This book unveils rising cases of education business failures around the world, the paucity of governance and business skill on educational boards, and the irrational contradictions faced by governments in determining education policy.

The Econocracy Joe Earle, Cahal Moran, Zach Ward-Perkins, 2017-07-06 A century ago the idea of the economy didn't exist. Now economics is the supreme ideology of our time with its own rules and language. The trouble is most of us can't speak it. This is damaging democracy. Dangerous agendas are hidden inside mathematical wrappers. Controversial policies are presented as proven by the models of economic science. Government is being turned over to a publicly unaccountable technocratic elite. *The Econocracy* reveals that economics is too important to be left to the economists and shows us how we can begin to participate more fully in the decisions which affect all our futures.

Digital Systems for Open Access to Formal and Informal Learning Demetrios G. Sampson, Dirk Ifenthaler, J. Michael Spector, Pedro Isaias, 2014-07-17 Today Digital Systems and Services for Technology Supported Learning and Education are recognized as the key drivers to transform the way that individuals, groups, and organizations learn and the way to assess learning in the 21st Century. Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24

Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e.g. school but also informal contexts e.g. family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in

the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Students at Risk of School Failure José Jesús Gázquez, José Carlos Núñez, 2018-10-18 The main objective of this Research Topic is to determine the conditions that place students at risk of school failure identifying student and context variables In spite of the fact that there is currently little doubt about how one learns and how to teach in some countries of the developed world there is still there is a high rate of school failure Although the term school failure is a very complex construct insofar as its causes consequences and development from the field of educational psychology the construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school failure School engagement builds on the anatomy of the students involvement in school and describes their feelings behaviors and thoughts about their school experiences So engagement is an important component of students school experience with a close relationship to achievement and school failure Children who self set academic goals attend school regularly and on time behave well in class complete their homework and study at home are likely to interact adequately with the school social and physical environments and perform well in school In contrast children who miss school are more likely to display disruptive behaviors in class miss homework frequently exhibit violent behaviors on the playground fail subjects be retained and if the behaviors persist quit school Moreover engagement should also be considered as an important school outcome eliciting more or less supportive reactions from educators For example children who display school engaged behaviors are likely to receive motivational and instructional support from their teachers The opposite may also be true But

what makes student engage more or less The relevant literature indicates that personal variables e g sensory motor neurodevelopmental cognitive motivational emotional behavior problems learning difficulties addictions social and or cultural variables e g negative family conditions child abuse cultural deprivation ethnic conditions immigration or school variables e g coexistence at school bullying cyberbullying may concurrently hinder engagement preventing the student from acquiring the learnings in the same conditions as the rest of the classmates Technoscientific Research Roman Z. Morawski,2024-06-04 Unlike the bulk majority of publications on philosophy of science and research ethics which are authored by professional philosophers and intended for philosophers this book has been written by a research practitioner and intended for research practitioners It is distinctive by its integrative approach to methodological and ethical issues related to research practice with special emphasis of mathematical modelling and measurement as well as by attempted application of engineering design methodology to moral decision making It is also distinctive by more than 200 real world examples drawn from various domains of science and technology It is neither a philosophical treaty nor a quick reference guide It is intended to encourage young researchers especially Ph D students to deeper philosophical reflection over research practice They are not expected to have any philosophical background but encouraged to consult indicated sources of primary information and academic textbooks containing syntheses of information from primary sources This book can be a teaching aid for students attending classes aimed at identification of methodological and ethical issues related to technoscientific research followed by introduction to the methodology of analysing dilemmas arising in this context Selected Speeches Pranab Mukherjee,2015

Nonreligion in Late Modern Societies Anne-Laure Zwillig, Helge Årsheim, 2022-06-14 This volume presents results from new and ongoing research efforts into the role of nonreligion in education politics law and society from a variety of different countries Featuring data from a wide range of quantitative and qualitative studies the book exposes the relational dynamics of religion and nonreligion Firstly it highlights the extent to which nonreligion is defined and understood by legal and institutional actors on the basis of religions and often replicates the organisation of society and majority religions At the same time it displays how essential it is to approach nonreligion on its own by freeing oneself from the frameworks from which religion is thought The book addresses pressing questions such as How can nonreligion be defined and how can the nones be grasped and taken into account in studies on religion How does the sociocultural and religious backdrop of different countries affect the regulation and representation of nonreligion in law and policymaking Where and how do nonreligious individuals and collectives fit into institutions in contemporary societies How does nonreligion affect notions of citizenship and national belonging Despite growing scholarly interest in the increasing number of people without religion the role of nonreligion in legal and institutional settings is still largely unexplored This volume helps fill the gap and will be of interest to students researchers policymakers and others seeking deeper understanding of the changing role of nonreligion in modern societies

Asian Religions, Technology and Science István Keul, 2015-03-27 Over the past five decades the field of religion and science scholarship has experienced a considerable expansion This volume explores the historical and contemporary perspectives of the relationship between religion technology and science with a focus on South and East Asia These three areas are not seen as monolithic entities but as discursive fields embedded in dynamic processes of cultural exchange and transformation Bridging these arenas of knowledge and practice traditionally seen as distinct and disconnected the book reflects on the ways of exploring the various dimensions of their interconnection Through its various chapters the collection provides an examination of the use of modern scientific concepts in the theologies of new religious organizations and challenges the traditional notions of space by Western scientific conceptions in the 19th century It looks at the synthesis of ritual elements and medical treatment in China and India and at new funeral practices in Japan It discusses the intersections between contemporary Western Buddhism modern technology and global culture and goes on to look at women s rights in contemporary Pakistani media Using case studies grounded in carefully delineated temporal and regional frameworks chapters are grouped in two sections one on religion and science and another on religion and technology Illustrating the manifold perspectives and the potential for further research and discussion this book is an important contribution to the studies of Asian Religion Science and Technology and Religion and Philosophy
