

MATHEMATICS 8

QUARTER 2

Lesson 1

Graphing Linear Equation In Two Variables

After going through this lesson, you are expected to write the linear equation $ax + by = c$ in the form $y = mx + b$ and vice versa and graph a linear equation given:

- a) Any two points;
- b) The x - and y - intercepts; and
- c) The slope and a point on the line.

Recall properties of equality that will help you solve linear equations in two variables. Among which are the Addition Property of Equality (APE) and Multiplication Property of Equality (MPE)

Addition Property of Equality states that that adding the same number to each side of an equation gives us an equivalent equation . If a , b and c are real numbers, and $a = b$, then $a + c = b + c$ or $a - c = b - c$.

Multiplication Property of Equality states that multiplying both sides of the equation with the same number gives us an equivalent equation. If a , b and c are real numbers and $a = b$, then $ac = bc$ or $\frac{a}{c} = \frac{b}{c}$
